This Book Review is brought to you for free and open access by the Library Faculty/Staff Scholarship & Research at Digital Scholarship@UNLV. It has been accepted for inclusion in Library Faculty Publications by an authorized administrator of Digital Scholarship@UNLV. For more information, please contact digitalscholarship@unlv.edu.

In spite of its rather intimidating size, this is a very readable book on the entire gamut of holistic approaches—everything from nutrition to magnets—for treating some of the most prevalent mental health issues. Kemper (chair of complementary and integrative medicine, Wake Forest Univ.) is eminently qualified to summarize voluminous research data (her book has 70 pages of references) and advocate for nontraditional therapies. Multiple summary tables and work sheets facilitate effective use of the information. She also offers proactive suggestions to address the factors that contribute to mental health problems in the family, school, and broader community.

Verdict Families dealing with mental health issues and health-care practitioners will find this a useful summary of the typical uses and research basis for the entire range of alternative approaches to relieving stress, anxiety, attention deficit/hyperactivity disorder, and depression. (Index not seen.)
