*Should the Economic Crisis  
Change our Assessment of  
Markets and Government?*

Clifford Winston  
Brookings Institution

# Broad Objectives of the Study

---

- Base policy debates on empirical counterfactual evidence.
- Begin accumulating evidence and identifying common themes so we don't have to start from “square one.”
- Provide guidance for policymakers.

# Sources of Market Failure

---

- **Market power in input/output**
- **Natural monopoly**
- **Imperfect information**
- **Externalities**
- **Public goods**

# Assessment

---

- **Is there evidence of market failure?**
- **Is government policy improving performance?**
- **Is government policy optimal?**

# Conclusions Before the Crisis

---

- **Intervention is often unnecessary.**
- **There are missed opportunities to improve efficiency.**
- **A greater role for market-oriented policies should be considered.**

# Conclusions in Light of the Economic Crisis

---

- **A serious market failure—imperfect information—did occur and it led to the economic crisis.**
- **But the current backlash against markets and broad claims of market failure are misleading and may lead to counterproductive policies.**
- **There is still little evidence that government micro policies are effective and that government can prevent the market failure that contributed to the crisis.**

# Approaches to the Issue

---

- **Applied welfare economics**
- **Counterfactual analysis**
- **Academic studies**
- **Not major divisions among studies**
- **More work clearly needed**

# Market Power: Antitrust Policy

---

- **Monopolization**
- **Collusion**
- **Mergers**
- **Deterrence**

# Antitrust Update

---

- Christine Varney, head of DOJ antitrust division, announced that the Department planned to restore an aggressive enforcement policy against corporations that abuse market dominance.
- Evidence that this will be an effective strategy?

# Natural Monopoly: Economic Regulation

---

- **Substantial partial deregulation**
- **Agricultural subsidies**
- **Quotas and tariffs**

# Imperfect Information

---

- **False advertising**
- **Product disclosure**
- **Product safety standards (offsets)**
- **Workplace safety**
- **Deterrence**

# Information Policy

Figure 1a. US Toy Related Injuries, 1994-2002

Source: Consumer Product Safety Review 1995-2003

\*Injuries include any toy related injury which requires hospital care and all deaths

# Information Policy

**Figure 1b. Occupational Injuries for Private Industry, 1973-2001\***

\*Occupational injuries include all injuries sustained on the job, including those that require time off from work and those that do not.

# Imperfect Information Update

---

- Children's Toys: One CPCS toy tester.
- HOUSING MARKET: home buyers and investors did not properly weight the credit risks they were assuming.
- Banks and rating agencies underestimated the probability of a major decline in housing prices.
- NOTE: most defaults were centered in regulated financial institutions that purchased and invested in sub-primes. Even Bernie Madoff's operations were subject to federal regulation.

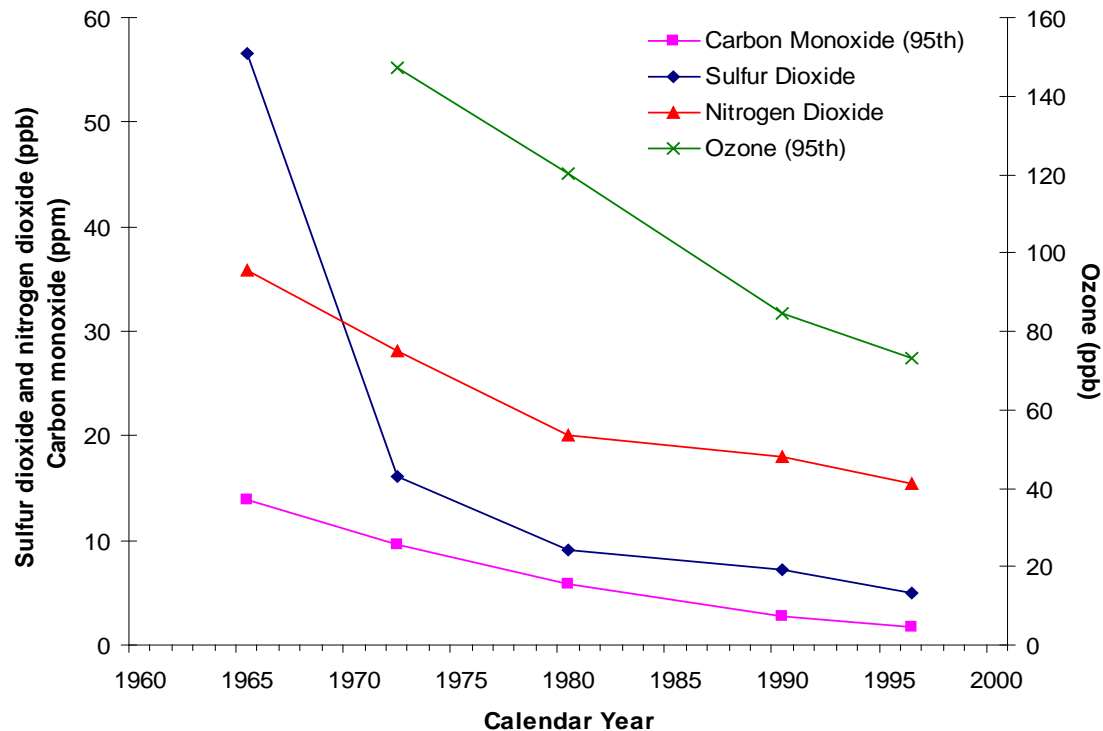

# Consumption Externalities

---

- **Automobile emissions**
- **Aircraft noise**
- **Smoking and drinking**

# Externalities

Figure 2. Average Ambient Levels of Air Pollutants, 1965-1995

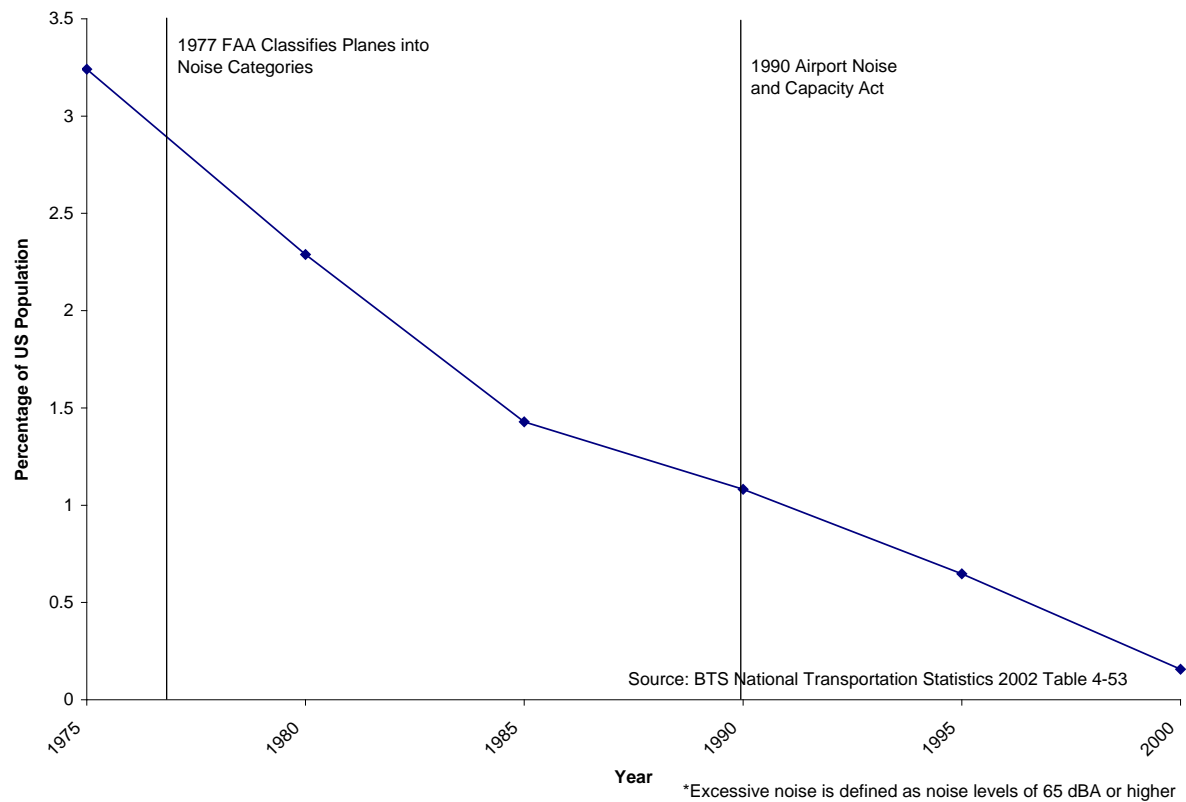

Based on data reported in F.W. Lipfert and S.C. Morris, "Temporal and Spatial Relations between Age Specific Mortality and Ambient Air Quality in the United States: Regression Results for Counties, 1960-97," *Occupational and Environmental Medicine* 59, no. 3 (2002), 156-74.

Carbon monoxide and ozone levels are averages of the 95th percentile of daily one hour readings at each monitoring location. Sulfur dioxide and nitrogen dioxide levels are averages of annual means from each monitoring location.

# Externalities

**Figure 3. Percentage of Population Exposed to Excessive Aircraft Noise\***

# Production Externalities

---

- **Air pollution**
- **Emissions trading**
- **Water pollution**
- **Superfund**

# Externalities

**Figure 4. Water Bodies Considered “Impaired” or Worse by the US Environmental Protection Agency, 1992-2000**

# Externalities Update

---

- **Raising Corporate Average Fuel Economy standards: consider tradeoffs.**
- **Cash for Clunkers: new cars are driven more than old cars.**
- **Cap and trade: rights to emit carbon should be auctioned off.**

# Public Production

---

- **Highways**
- **Airports**
- **Urban transit**

# Public Production

**Figure 6. Average Annual Traffic Delay in Major Metropolitan Areas, 1982-2001**

# Public Production

Figure 7. Changes in Air Travel Time, 1977-2004

# Public Production

Figure 8. Government Transit Operating Assistance, 1976-2001

# Public Production Update

---

- **Public infrastructure spending: a source of economic stimulus?**
- **Two tiny villages in Alaska are getting \$28 million for airport funds.**
- **Washington state isn't using stimulus funds to relieve congestion in Seattle but is spreading the funds to other regions of the state.**
- **Money for high speed rail!!!**

# Synthesis Before the Crisis

---

**Less intervention warranted:**

- **Antitrust**
- **Monopsony**
- **Regulation**
- **Information**

# Synthesis Before the Crisis

---

**Missed opportunities to improve economic efficiency:**

- **Consumption externalities**
- **Production externalities**
- **Public production**

# Explaining Performance

---

- **Robustness of markets**
- **Agency inflexibility**
- **Policy conflicts**
- **Political forces**
- **Do policymakers learn?**

# Updating the Synthesis

---

- **Market failure related to imperfect information clearly contributed to the economic crisis.**
- **Government failure is still a major concern as government intervention expands in several areas.**
- **It is far from clear that government has learned from its past failures. It is clear that markets are learning—but they will never be able to eliminate the costs associated with risk and future crises.**

# What Should the Interested Lay-Person Take Away?

---

- **Markets make mistakes—sometimes big ones. Does that mean government intervention will improve matters?**
- **Government Failure imposes large costs; market performance is often better than recognized.**
- **Retrospective empirical assessments and the accumulation of evidence contribute to “truth.”**

# What Should the Interested Lay-Person Take Away?

---

- **Policy outcomes and the sources of inefficiencies are similar across an array of policies.**
- **Challenge advocates to provide scholarly evidence.**
