Hydrogen-Induced Embrittlement of Candidate Target Materials for Applications in Spallation-Neutron-Target Systems

Introduction

The primary objective of this task is to evaluate the effect of hydrogen on environment-assisted cracking of candidate target materials for applications in spallation-neutron-target (SNT) systems such as accelerator production of tritium (APT) and accelerator transmutation of waste (ATW). The materials selected for evaluation and characterization are martensitic stainless steels including Alloy HT-9, Alloy EP 823 and Type 422 stainless steel. The susceptibility to stress corrosion cracking (SCC) and hydrogen embrittlement (HE) of these materials are being evaluated in environments of interest using tensile specimens under constant load and slow-strain-rate (SSR) conditions. Further, the localized corrosion behavior of these alloys is being evaluated by electrochemical polarization techniques. The extent and morphology of cracking and localized corrosion of the tested specimens are being determined by optical microscopy and scanning electron microscopy (SEM). The concentration of hydrogen resulting from cathodic charging will be analyzed by secondary ion mass spectrometry (SIMS).

Personnel

The current project participants are listed below.

Principal Investigator (PI): Dr. Ajit K. Roy

Co-PI: Dr. Brendan J. O'Toole
Department of Mechanical Engineering, UNLV
Roy: Phone: (702) 895-1463 email: aroy@unlv.edu
O'Toole: Phone: (702) 895-3885 email: bj@me.unlv.edu

Investigators (UNLV): Dr. David W. Hatchet, Department of Chemistry
Dr. Zhiyong (John) Wang, Department of Mechanical Engineering
Mr. Konstantin G. Zobotkin, Department of Mechanical Engineering
Mr. Mohammad K. Hossain, Department of Mechanical Engineering
Mr. Mark Jones, Department of Mechanical Engineering
Mr. Aaron Tippetts, Department of Mechanical Engineering
Hatchet: Phone: (702) 895-3509 email: dhatchet@cmail.nevada.edu
Wang: Phone: (702) 895-3442 email: zwang@nscee.edu
Zobotkin: Phone: (702) 895-1027 email: Zobotkin@hotmail.com
Hossain: Phone: (702) 895-1027 email: mdkamal71@hotmail.com
Jones: Phone: (702) 384-3756 email: kamproducts@earthlink.com
Tippetts: Phone: (702) 460-6408 email: aartip@msn.com

Collaborator (DOE): Dr. Ning Li, Los Alamos National Laboratory, New Mexico
Phone: (505) 665-6677 email: ningli@lanl.gov

Accomplishments

Experimental heats of Alloys HT-9, EP-823 and 422 (three heats of each alloy) have been melted and processed into round bars at the Timken Research Laboratory, Canton, Ohio. Thermal treatments have also been completed on one heat each of these three alloys at this vendor's heat-treating facility. The chemical compositions of these alloys, and thermal treatments performed on them are shown in Table I.

Table I
Chemical Composition of Martensitic Stainless Steels⁺

Material/Heat No.	Elements (wt %)													
	C	Mn	P	S	Si	Cr	Ni	Mo	Cu	V	W	Cb	B	Ce
Alloy HT-9/2048*	0.18	0.40	0.012	0.004	0.20	12.26	0.49	1.00	0.01	0.30	0.46	--	--	--

Alloy EP-823/2056	0.14	0.56	0.013	0.005	1.11	11.68	0.66	0.73	0.002	0.30	0.62	0.22	0.009	0.05

⁺Melted and Processed at Timken Research.

*Thermal Treatments Performed:

Austenitized: 1850°F/ 1 hr/ OQ

Tempered: 1150°F/ 1.25 hr/ AC

(In batches) 1150°F/ 1.75 hr/ AC

1150°F/ 2.25 hr/ AC

OQ: Oil Quenched

AC: Air Cooled

Tensile specimens have been machined from all heat-treated bars by a qualified machine shop located in Pennsylvania (Laboratory Testing, Inc.). Simultaneously, efforts are well underway to machine small cylindrical specimens to perform electrochemical polarization experiments. Meanwhile, the construction of the "Materials Performance Laboratory (MPL)" has been completed. MPL has numerous materials-related testing capabilities including evaluation of SCC/HE susceptibility under both constant load and SSR conditions, evaluation of localized corrosion (pitting and crevice) behavior using potentiostats, performance of thermal treatments, sample preparation and metallographic evaluations using a high-resolution optical microscope.

The room-temperature mechanical properties of Alloy EP-823 have been determined by using calibrated MTS equipment. The mechanical properties data are shown in Table II. Further, SCC tests of Alloy EP-823 are currently ongoing in SAW(M) environment at ambient temperature using calibrated proof rings (Table III). The experimental setups for constant-load SCC testing and electrochemical polarization studies are shown in Figures 1 and 2, respectively. A typical calibration curve showing potentiodynamic polarization behavior of Type 430 ferritic steel in 1N sulfuric acid solution at 30⁰C is illustrated in Figure 3.

Table II

Ambient Temperature Mechanical Properties of Alloy EP-823* Tested

Material/Heat No.	Sample ID	YS (ksi)	Avg. YS (ksi)	UTS (ksi)	Avg. UTS (ksi)	% El	% RA	Hardness
Alloy EP-823/2054	S1	110.7	110.5	130.0	129.77	4.96	59.28	R _C 30
	S2	109.6		128.9		5.18	62.19	R _C 30
	S3	111.3		130.4		5.68	61.52	R _C 30

*Thermal Treatments Performed: Austenitized (1850⁰F/1hr/OQ)
 Tempered (1150⁰F/1.25hr/AC)

Table III

Status of Constant-Load SCC Tests of Alloy EP-823

Material/Heat No.	Sample ID	Environment	Temperature	Applied Stress/Load	Status
Alloy EP-823/2054	S4	SAW (M)	Ambient	95% YS / 5312 lbs	In Progress
	S5	SAW (M)	Ambient	90% YS / 5042 lbs	In Progress
	S6	SAW (M)	Ambient	90% YS / 5042 lbs	In Progress
	S7	SAW (M)	Ambient	95% YS / 5312 lbs	In Progress

SAW: Simulated Concentrated Acidic Water
 M: Modified 2<pH<3

Figure 3. Potentiodynamic Polarization Curve for Type 430 Ferritic Stainless Steel in 1N H₂SO₄ Solution at 30⁰C, Scan Rate: 0.166 mV/sec (ASTM G 5)

Problems

No problems are anticipated.

Status of Funds

Expenditures incurred during the first year are within the target amount allocated.

Plans for Year 2

- Continue SCC/HE testing of all three types of martensitic stainless steels.
- Perform heat treatments of remaining heats of all three test materials.
- Perform localized corrosion testing using electrochemical techniques.
- Perform metallurgical evaluations including microstructural characterizations.
- Conduct failure analyses using SEM.
- Prepare technical/scientific papers for presentations and publications.
