**Title:** Improving Diagnostic Accuracy: Text Comprehension and Detection of Gambling Disorder

**Authors:** Samuel C. Peter, James P. Whelan, Rory A. Pfund, & Andrew W. Meyers

**Abstract:**

Self-report questionnaires are widely used in the identification of gambling problems. If respondents complete these questionnaires without accurately comprehending each item, the likelihood of mis-identification of problematic gambling behavior increases.

This presentation first reviews the most commonly used self-report questionnaires of gambling disorder. Using advanced text comprehension tools, we identified characteristics of questionnaire items that may interfere with accurate comprehension. These problems included items which likely overload the working memory capacity of respondents, are too syntactically complex, or use language that may be too technical or unfamiliar to the reader.

We then present data from a project designed to test whether these text comprehension tools may be useful in the process of developing a questionnaire of gambling disorder that is easier to understand and potentially more diagnostically accurate than currently used diagnostic tools such as the National Opinion Research Center DSM-IV screen for gambling problems (NODS). Using a two-group experimental design, we found that individuals accurately reported on symptoms of gambling disorder at a significantly higher rate when responding to this newly developed questionnaire than when completing the NODS. Individuals with college degrees compared to those who did not complete high school also more accurately reported symptoms of gambling disorder.

**Implications:**

Presently used self-report questionnaires of gambling disorder are likely misunderstood by a significant number of individuals that are screened for gambling disorder. This poses a threat to accurate detection of gambling disorder. Text comprehension tools can be used to evaluate and improve the comprehension and diagnostic accuracy of these questionnaires.

   d. Bio: James P. Whelan, PhD is a Professor of Psychology and the Co-director of
      The Institute for Gambling Education and Research at The University of
      Memphis. Established in 1999, the Institute includes funding outpatient clinic for
      individuals experiencing a gambling disorder and a research lab where we
      conduct translational research about risk and protective factors for gambling
      problems as well as research on the assessment and treatment of disordered
      gambling.

3. Rory A. Pfund, MS
   a. Affiliation: University of Memphis
   b. Address: 400 Innovation Drive, Memphis, TN 38111
   c. Email: rapfund@memphis.edu
   d. Bio: Rory A. Pfund, MS is a fifth-year student in the clinical psychology program
      at The University of Memphis. He received his Bachelor of Science in
      psychology from University of Scranton in 2013. His research interests center on
      the processes and mechanisms that improve psychotherapy outcomes for
      individuals with gambling disorder. He is particularly interested in understanding
      the process of initiating and continuing psychotherapy to reach a successful
      outcome.

4. Andrew W. Meyers, PhD
