## INFORMATION TO USERS

The most advanced technology has been used to photograph and reproduce this manuscript from the microfilm master. UMI films the text directly from the original or copy submitted. Thus, some thesis and dissertation copies are in typewriter face, while others may be from any type of computer printer.

The quality of this reproduction is dependent upon the quality of the copy submitted. Broken or indistinct print, colored or poor quality illustrations and photographs, print bleedthrough, substandard margins, and improper alignment can adversely affect reproduction.

In the unlikely event that the author did not send UMI a complete manuscript and there are missing pages, these will be noted. Also, if unauthorized copyright material had to be removed, a note will indicate the deletion.

Oversize materials (e.g., maps, drawings, charts) are reproduced by sectioning the original, beginning at the upper left-hand corner and continuing from left to right in equal sections with small overlaps. Each original is also photographed in one exposure and is included in reduced form at the back of the book. These are also available as one exposure on a standard 35mm slide or as a 17" x 23" black and white photographic print for an additional charge.

Photographs included in the original manuscript have been reproduced xerographically in this copy. Higher quality 6" x 9" black and white photographic prints are available for any photographs or illustrations appearing in this copy for an additional charge. Contact UMI directly to order.

**ABSTRACT:** The purpose of this research was to evaluate the resources available to the field of court reporting in the United States, specifically, the existence of an eclectic dictionary which encompasses all known methodologies and advanced principles.

This study reviewed articles, texts, and manuals pertaining to court reporting to ascertain the need for an eclectic dictionary.

A questionnaire was prepared and sent to all court reporting program directors of accredited programs in the United States. They were asked to provide their overall philosophy in terms of developing an eclectic dictionary and requested to respond about the need for such a dictionary.

From the responses to the survey, an eclectic dictionary was created and included and appended to the study.

## ACKNOWLEDGEMENTS

I would like to thank my committee and the administrative staff of the College of Education, University of Nevada, Las Vegas. Dr. Mark Beals, Dr. Anthony Saville, and Dr. Arlen Collier were especially helpful. Also deserving of thanks are the wonderful people of the National Shorthand Reporters Association (NSRA), especially Marshall Jorpeland, Jay Schaivo, and Student Representative, Mary Layton. I also would like to point out that without my students' encouragement this project would not have been as exciting as it was. Also extremely helpful were John Fields, Webster Catherwood, Linder Chlarson, Jean Gonzalez, Glory Johnson, and Lisa Witte.

## CHAPTER 1

### PURPOSE AND ORGANIZATION

#### Introduction

Court reporting is a unique field of vocational study; that is, it is comprised mainly of five major methodologies of learning at the beginning level. Although several texts exist that can be categorized as specialized dictation material, the field of court reporting is lacking continuations of those basic methodologies. Until now, both the information and quality of advanced learning in court reporting usually was dependent upon the resources, experience, and educational attitude of individual instructors. These individuals could be placed on a continuum extending from writing all words out according to sound and syllabification to the other extreme, i.e., one-stroke shortcuts for common words and phrases.

All of these methodologies incorporated shortcuts to some degree. However, these abbreviations, also called briefs or arbitraries, usually were restricted to the beginning methodology and did not encompass advanced methodologies or specialized writing, which is inherent to court reporting. In order for potential court reporters to build writing speed to certification levels required in the

United States, they incorporated briefs for words and phrases which occur with significant frequency.

Ironically, these methodologies all are based on the concept of rote memorization, i.e., a word or phrase can be written only one way; therefore, it must be memorized and be available for immediate recall. When students matriculate to advanced status or enter the profession, they are forced to adapt and learn problem-solving techniques not covered in the methodologies. Court reporters would be required to adjust to a new learning technique.

As an educator in court reporting, this author had noticed that no comprehensive resources existed to present advanced machine shorthand writing. Also, this author had acquired an extensive collection of advanced words and phrases over a twenty-year period while working as a court reporter and teaching court reporting. These words came from other reporters, other systems, and personal creations. It was also realized that a student or instructor had to be selective when incorporating these resources. It became obvious that advanced words and concepts were used but usually hidden from the standard curriculum. Also, it was suspected that many more existed that very few students or practitioners were privy to.

Further, the dichotomy between what is learned and what is relearned became a strong consideration for this author in adopting other's concepts. As an educator, this author,

who was instrumental in choosing a beginning system for several schools, had difficulty selecting one methodology that would afford the right climate for alternative ways of writing. It also became apparent that such an eclectic system might be impossible to create because of the myriad of variables that exist in the English language and the particular needs and concepts of individuals and differing school philosophies.

It was also important to note that many programs required students to create and maintain personal dictionaries in which they would record abbreviations or briefs for easy reference. Since these personal dictionaries were the only complete resource students had to indicate changes in their basic system and advanced concepts, they usually were written in longhand. Moreover, they were rarely in exact alphabetical order; rather they tended to be posted with new additions by groups under the letters of the alphabet or where there was room available, causing students to spend additional time looking up forgotten outlines. Finally, it has been this author's experience that a student would end up near the end of his education in court reporting with a dictionary that was comprised of handouts, scraps of paper, and various concepts and briefs from instructors, other students, and friends in the profession. Student dictionaries, unless carefully

arranged and rewritten, were not designed for quick study and conceptual learning.

#### Statement of the Problem

Although court reporting was an integral part of the education of students in the field, there was at this time no educational court reporting Eclectic Machine Shorthand Dictionary (EMSD) for training students and for use as a resource for the practicing, professional court reporter. This was detrimental to the proper training and specialized skills inherent to court reporting.

The purpose of this research was to survey all court reporting program directors by means of an author-designed questionnaire with the intent to gather information pertinent to:

1. Identifying the need for a comprehensive machine shorthand dictionary,
2. Identifying those aspects or concepts that must be included in a comprehensive machine shorthand dictionary, and
3. Identifying the types of study and testing methodologies and procedures that should be included in a comprehensive machine shorthand court reporting dictionary.

From the information gathered and the review of the literature, an Eclectic Machine Shorthand Dictionary to meet this need was developed by the writer.

### Premises

Premise One: A review of the literature of court reporting material should reveal a need for a student court reporting dictionary comprehensive to the most common and most popular methodologies.

Premise Two: Developing a court reporting student EMSD would be desirable and in the best interest of advanced court reporting education.

Premise Three: An eclectic dictionary could be developed to meet the overall court reporting needs of court reporting programs.

Premise Four: Constructing an EMSD would be possible, based on data collected. Furthermore, there should be enough congruence among responses of directors of programs that an overall consensus could be derived.

Premise Five: Directors of court reporting programs were considered knowledgeable enough in the field of court reporting to respond to the needs of their programs.

This study asked the following questions:

1. What validation existed supporting the need for an EMSD for advanced students in court reporting?

2. What general basic principles or concepts of court reporting study techniques should be included in a comprehensive dictionary?
3. What aspects of court reporting would be needed and included to develop a more comprehensive advanced program for court reporting students?

#### Delimitations and Limitations

This study was developmental research utilizing survey techniques to obtain the major aspects of information. It was delimited by the relatively small number of accredited court reporting programs in the United States.

Some court reporting program directors themselves have limited backgrounds and work experiences in court reporting techniques, which was pointed out by the NSRA's 1986 report prepared by L. M. Schleich entitled "An Analysis of the Human Resources Committee's Survey of Court Reporting Schools." This report cited that some program directors, who may also be responsible for other curricula, may not be court reporting trained, but it does not mention the number or percent who are not court reporting trained. Others may be removed from the clinical setting by their current administrative duties and, consequently, may not have kept pace with the changing court reporting field.

Finally, some institutions may not have employed a court reporting program director. When this was so, the dean or administrative head of that sector was asked to complete the survey.

However, these situations were considered small enough, according to the NSRA study, not to affect the results of this investigation significantly.

#### Significance of Study

There have been numerous books, journals, and articles written describing and detailing the responsibilities of a court reporter's capability for writing precise and accurate shorthand records when verbatim testimony was required. The impact of these court reporting methodologies on progress in court reporting should not be underestimated. While new concepts and additions to curricula are slow in taking place in court reporting, one of the main concerns of the National Shorthand Reporter's Association (NSRA) is to improve court reporting education and, in answer to a critical shortage of qualified court reporters throughout the country, increase the number of qualified candidates entering the profession.

Even though several methodologies of learning court reporting techniques existed, there was no definitive, comprehensive machine shorthand dictionary, text, or guide written which specifically promoted problem-solving skills beyond the initial system learned.

It was vitally important to establish the need for this study by discussing it with some of the people who work within the industry, and whose comments were peripheral to or corroborated by this study's eventual findings.

In February 1989, letters were written to a number of professionals in the field, requesting their professional assessment of the need for a student court reporting EMSD.

One of these professionals, Jean Gonzalez, who was one of the authors of a major shorthand system, and was Curriculum Coordinator for South Coast College of Court Reporting in Westminster, California, responded to the letter. She observed, "I have often thought that such a dictionary is needed. The students at our school could really use a dictionary of this type" (Ltr., May 2, 1989).

Glory Johnson, owner of a free-lance agency and Vice President of RapidText, an innovative concept in shorthand recording, also responded. Johnson, a 17-year veteran of court reporting, also saw a need for the proposed dictionary. "This reference dictionary can be utilized greatly in the field of education for machine shorthand, for the working reporter both in court and deposition work, and now for the rapid data entry operator. Having dealt in each of these arenas in our profession, it will be wonderful to have a reference book to give this type of information," she concluded (Ltr., May 2, 1989).

A certified court reporter in New York State, Diane Gagliano, epitomized the practicing court reporter. According to her, "A project like this has been needed for a long time as no resource exists to date with this kind of information which is critical to court reporting studies-- which never ends" (Ltr., May 8, 1989).

Another practicing court reporter certified in California, Stephen Roche, commented, "I appreciate the time and effort that is expended in order to publish such a dictionary. It will be especially helpful when writing for the computer" (Ltr., Jun 28, 1989).

Anita Springs-Walker, an advanced court reporting student at Clark County Community College in North Las Vegas, Nevada, revealed, "It's about time somebody thought up a way to save time and help the student once out of beginning theory" (Interview, March 12, 1989).

Another advanced student, Joe Burkowski, was very enthusiastic about a proposed comprehensive dictionary. He lamented, "The learning process is a non-stop, always continuing, entity. I have learned many outlines and later had to relearn them again because they interfered with what I had already learned" (Interview, March 12, 1989).

In a telephone interview, Mary Layton, a Phoenix student who hopes to pass an upcoming RPR examination, disclosed, "I was amazed at how differently everyone I know writes; even though, we all started out with the same

system. It is almost personal, and unfortunately other students and reporters haven't the time to pass on information that might be useful to others." Layton elaborated that even if these people did have the time, no forum exists to exchange such information. She felt that advanced learning was uniquely restricted to the school attended, friends, and reporter organizations. However, these organizations, while presenting seminars on information pertinent to the field, have not presented seminars in advanced shorthand writing skills (Interview, March 13, 1989).

The preceding three students were selected as representative of over 30 students from two western schools, one a proprietary school and the other a community college, interviewed during the month of March, 1989.

In a recent article in the National Shorthand Reporter, Richard D. Featheringham (1989) contended that utilizing preview words prior to testing materials helped the student to write faster. He confided, "...we provide suggested machine shorthand outlines--often more than one suggestion for a word or phrase. Because some students have learned their [methodologies] at other schools, I don't insist they use my suggested outlines." Although he pointed to an advanced concept (What is your name and address = WHAURND) as an example of a preview word, he neglected to say where that principle originated (p. 44-5).

### Methods of Research

Phase One: Validation. The first step in the study was to develop a questionnaire from the current literature which provided information the researcher desired. For validation purposes, the questionnaire was distributed to a panel of 17 experts from five western states. Once the field test questionnaire was returned, it was revised accordingly.

Phase Two: Distribution. The final questionnaire was distributed to all accredited court reporting program directors or their representatives. A follow-up contact was made by telephone for those questionnaires not returned.

Phase Three: Analysis. The questionnaire was analyzed based on respondents' answers. Aside from demographic information, each question was tallied by percent of responses. A percentage of 50 percent or larger was arbitrarily considered a consensus and used as the guide in the development of an Eclectic Machine Shorthand Dictionary. The information was then utilized to:

1. Compare the assessments of court reporting program directors with the review of the current literature,
2. Categorize concepts and specific types of court reporting methodologies essential to advanced students in court reporting, and

3. Develop an EMSD based on the overall needs indicated by the review of the literature and the national survey.

#### Definition of Terms

This section includes definitions of terminology specific to court reporting or specific to this study. For example:

Advanced Court Reporting Student. One who has completed a basic court reporting system.

Basic Theory or System. A term used interchangeably with beginning court reporting theory, system, or method. In this study, theory is meant to be the same as methodology or system as it refers to beginning machine shorthand education.

Computer Aided Transcription (CAT). A method of preparing transcripts from electronic impulses recorded along with a hard copy on a shorthand machine. The recorded material is transmitted into the computer, and the computer program translates the impulses into transcript form.

Courts of No Record. Those courts that do not require an official transcript to be made automatically. These courts are also known as Courts Not of Record (Roderick, 1985, p. 2).

Court Reporter. A person capable of recording conversations verbatim using a phonetic system. Roderick

(1985) provided a more basic definition: "One who records verbatim the deposition of a witness or the proceedings in court and produces a written transcript thereof" (p. 55).

Court Reporting. A field in which a certified, verbatim copy of an official proceeding is produced.

Court Reporting School. A school which prepares students to become court reporters.

Court Reporting Theory or Methodology. Court reporting theory or methodology pertained to a set organization of learning machine shorthand concepts outlined by the system used. All systems are comprised of phonetic representations and shortcuts. Once machine shorthand basic concepts were completed, a student was expected to be capable of committing a shorthand representation of any word in the English language (Roberts, Walsh, & Gonzales, 1984, p. iii).

Electronic Recording (ER). A method in which court testimony on video or audio tape for later transcription is recorded (Knapp, 1984).

Entry-Level Shorthand Reporter. One "...who possesses the knowledge, skill, and ability to produce a verbatim record of proceedings" (Professional Exam. Svc. & NSRA, 1985).

Lower or Inferior Courts. Courts which have restricted domains (e.g., traffic court). These courts are usually Courts of No Record. However, cases tried in lower or

inferior courts can be appealed to a higher court (Roderick, 1985, p. 2).

Machine Shorthand. A method of rapid writing on the shorthand machine by way of a system of alphabetic characters to represent phonetic English.

Note Reader. An individual who is specifically trained only to read the hard-copy notes that are produced by the shorthand machine. Moreover, a note reader is not trained to become a reporter.

Pen and Pencil Systems. Those shorthand methods (also known as Pen and Ink systems) which utilize either an ink pen or lead pencil to commit a shorthand record to paper.

Professional/Practicing Reporter. Since some states do not require certification, this study considered professional or practicing reporters to be individuals who, after training, functioned as verbatim recorders of depositions, hearings, and court proceedings.

Shortcuts. Shorthand outlines that are abbreviated to save time. Usually a shortcut, also known as a brief or arbitrary, is devised for a word that is common and otherwise cumbersome due to the nature of English.

Shorthand Machine. The basic shorthand machine weighs 4½ pounds, has 24 keys, and commits indelible ink to continuous paper. Currently, many manufacturers modify the basic machine to suit computers or shorthand systems.

Nevertheless, the modifications are minor and usually do not affect the basic functions of the shorthand machine.

Transcript. A deposition or a court proceeding which has been printed verbatim. A court reporter usually prepares transcripts (Roderick, 1985, p. 55).

Verbatim. Word for word. "A 'verbatim record' is one which accurately reflects the spoken word and nonverbal communication and action" (Professional Exam. Svc. & NSRA, 1985).

### Organization of the Study

Chapter 1: Purpose and Organization. In order to develop a strategy which ultimately resulted in adding to the body of knowledge in court reporting education, this study (1) examined the literature pertinent to the field, (2) developed a method of collecting information related to the researcher's stated problem, and (3) analyzed data and synthesized results in order to bring about meaningful change in court reporting education to include an introduction and purpose of the investigation, objectives and research questions, extent or scope (premises), limitations, methods, definitions of terms, organization, and a summary pertinent to this study. The summary briefly reviews the main points of the chapter.

Chapter 2: Review of the Literature. The review of the literature includes an historical perspective of court

reporting education, its growth, development, recent trends, and all literature pertinent to the development of an EMSD including an introduction, which explains the chapter's purpose and forewarns of the chapter's main contents; a summary and critique of previous investigations; analysis of laws, methodologies, or fundamental concepts which relate to the study; unresolved issues, significant problems, and unanswered questions requiring investigation; evidence coupled with reasoning that the specific investigation proposed arose out of the needs demonstrated in this chapter and that the proposed study filled in gaps or add to substantive understanding; and a brief summary of the chapter's contents.

Chapter 3: Investigative Procedures. Investigative procedures include: an introduction; the design and step-by-step execution of the plan of study; criteria used to determine whether the data were valid and reliable; how the data were analyzed to attain the objectives, or respond to the research questions; and a brief summary of the chapter's contents.

Chapter 4: Results. The results were analyzed and include: an introduction; results regarding the questions being investigated; results regarding interactions, if any, among the objectives and research questions; results or findings on matters not planned as part of the study but

which were uncovered in the investigation's course and which are relevant; and a brief summary of the chapter's contents.

Chapter 5: Summary, Conclusions, and Implications.

Summary, conclusions and implications drawn from the analyzed data were used to develop a court reporting EMSD in court reporting to include: an introduction; summary and conclusions drawn regarding the research questions as stated in Chapter 1 (each were dealt with as a separate topic); conclusions, if any, regarding matters not originally planned as part of the study; discussion of the conclusions, including implications and indications for present and future practices, and for additional needed investigations; and a brief summary of the chapter's contents.

Information gathered from this study also may be used by program directors in assessing their current court reporting curricula and identifying any existing deficiencies.

The last two sections consist of the references and appendices relating to the study.

CHAPTER 2  
REVIEW OF THE LITERATURE

Introduction

This chapter includes an historical perspective of court reporting education; its growth and development; analysis of laws; methodologies or fundamental concepts; recent trends, and issues pertinent to the field of court reporting and to the development of an EMSD. When appropriate, each section embodies unresolved issues, significant problems, and unanswered questions requiring investigation; evidence coupled with reasoning that the specific investigation proposed arises out of the needs demonstrated in this chapter and that the proposed study could fill in gaps or add to substantive understanding; and concludes with a brief summary of the chapter's contents.

Historical Perspective.

Dating from over two thousand years ago, shorthand notes have been found annotated to the margins of ancient Greek and Egyptian manuscripts. In fact, in 4 B.C. an ex-slave, Marcus Tullius Tiro, created a shorthand system to facilitate the recording of Cicero's speeches. Tiro's system, known as Tironian, was considered prestigious enough to be learned by Emperor Augustus. Augustus passed on the

training to his descendants (Court Reporting Institute, 1988, p. 2).

However, today's shorthand systems are descendant from Timothy Bright's treatise on shorthand presented to Queen Elizabeth I. His system is considered the first to be almost completely phonetic. Using shorthand became widespread by clergy and scholars because of the time it saved. Other educated men used a shorthand system to effect cryptic messages and diaries. One great example of this practice was Samuel Pepys' diary which is considered a masterpiece (Court Reporting Institute, 1988). Written between 1660 and 1669, his diary has become a standard portrait of that era's court life. Without the veil of secrecy, Pepys' diary would not have been able to be as frank and revealing as it was.

The first official reporter in England over parliamentary debates was Thomas Gurney. In 1750, he published his system of shorthand. In the intervening years, several systems were published, but it was not until 1837 that the first, truly modern system of shorthand emerged. This system was called Pitman Shorthand after its creator. The Pitman system was followed by another great system called Gregg Shorthand 50 years later (Court Reporting Institute, 1988, p. 3).

These modern systems were pen and pencil methods; that is, written by hand. It was not until the early 1900s that

machine shorthand debuted. "Known as machine shorthand, stenotypy, or touch shorthand, it has gradually replaced both Pitman and Gregg as the main system used by reporters to the point that today most practicing reporters use this system, which is taught exclusively in all reporting schools" (Court Reporting Institute, 1988, p. 3).

Patented in 1879, the first shorthand machine which attained much success was the Bartholomew Stenograph. However, the Ireland keyboard, which is still in use today, did not appear until 1911. Machine shorthand was prevalent during World War I, but all but died out for the next ten years. Shorthand by way of a machine was reintroduced in 1928. This "new" machine came with a textbook of a simplified system.

According to most sources, Ward Stone Ireland usually is ascribed with the invention of the shorthand machine. It is he who was successful in defining the best uses of his machine to create notes with the least amount of strokes possible.

Ireland was responsible for limiting the shorthand machine's keyboard to correspond to the ten fingers of an operator, eliminating any elaborate reaching. Most of the "keying in" was done by keys immediately below the fingers (Glassbrenner & Sonntag, 1986, p. i).

He diligently altered keyboards until he was confident that several letters and words could be written with one

stroke. Not until he had studied and developed his machine for nine years did he apply for a patent in 1910. With his new patent, he founded Universal Stenotype Company. Assembling 30 teachers, Ireland himself instructed them in the use and concepts of his invention (Glassbrenner & Sonntag, 1986, p. ii).

This new machine was not restricted to the United States and the English language. Glassbrenner and Sonntag (1986) acknowledged that at least 46 machine shorthand inventors were active in the development of a machine that could write shorthand. They affirmed, "In addition, there are several noteworthy designs native to foreign language usage, such as: the Palantype Machine invented by a French woman in 1939, and the Russian CTM-2 and Japanese Sokutaipu machines which came out after World War II, bearing a close resemblance to the present day Stenograph machine" (p. i). Nevertheless, Ireland's shorthand machine did not meet with immediate success.

Machine shorthand or stenotype was very different from conventional methods predominated by Gregg and Pitman shorthands. Gregg and Pitman relied on drawn characters to represent consonants, vowels, syllables, and affixes. These systems incorporated briefs, but kept these shortcuts to a discreet minimum. The drawn characters were chained together to form words and phases. Conversely, machine shorthand had the ability to write consonants, vowels,

syllables, and affixes in one stroke. Often a multi-stroked word in the other systems would translate to one stroke on the shorthand machine.

To illustrate the differences in speed, Glassbrenner and Sonntag (1986) disclosed that Ireland entered nine of his students (ages 15 to 19) in the National Shorthand Reporters Association speedwriting contests in 1914. They reported, "These nine youngsters were pitted against 30 seasoned court and convention reporters who wrote the popular systems of pen and pencil shorthand. These nine youngsters captured practically all of the honors in speeds of 150, 200, 220, and 280 words per minute" (p. ii.). Apparently intimidated with the results of these contests, the NSRA discontinued its speedwriting contests for a period of years. Even when these contests were resumed in the 1920s, stenotypists were not allowed to compete. In fact, it wasn't until 1952 that machine shorthand writers were again allowed to compete in NSRA's speedwriting contests (Glassbrenner and Sonntag, 1986, p. ii). Arriving full circle, the yearly contests now are made up of machine shorthand trained writers. In recent years, it has been rare that a pen and pencil writer has been entered in the competition.

National Shorthand Reporters Association (NSRA).

Founded in 1899, the NSRA is "a professional organization of court and freelance shorthand reporters" (Gales, et al.,

1986, p. 1). During its early years, machine shorthand was not as acceptable as traditional methods of shorthand (called pen and pencil shorthand) and was usually only used for routine reporting which did not require verbatim transcripts or any certification of what had transpired. In the intervening years, individuals who were adept at machine shorthand began to infiltrate all sections of the shorthand field to include conventions and the courts (Gales, et al., 1986).

It took almost ten years, but in 1937, the first machine shorthand reporter was allowed to "jump" the divider that separated spectators and lawyers from the bench. It landmarked the machine shorthand reporter as an "official" of the court and provided a deserved place for the shorthand machine (Gales, et al., 1986).

It became obvious that stenotypists were capable of speeds four times faster than Gregg or Pitman. In the courtroom, faster speeds were needed for a verbatim transcript to be prepared, and machine shorthand gained a firm and lasting place of respect in the field of shorthand (Gales, et al., 1986).

Ironically, the machine--which in its basic form weighs only 4½ pounds, has only 24 keys, and prints alphabetic characters onto continuous paper in indelible ink--has never made a complete transition into the office environment. While there have been no studies done, it was suspected that

the machine in the office was looked on as cumbersome, therefore, impractical. It also was suspected that many office workers would not be comfortable dictating with a machine present. One would think that this relationship is changing, given the proliferation of machines that exist in the office for dictational needs (Gales, et al., 1986).

In summary, shorthand reporters have been utilizing the Ireland keyboard which permits input at speeds four or more times faster than those attained by pen and pencil methods. The higher speeds can be attained because instead of keyboarding individual letters of the alphabet, the reporter writes combinations of letters, whole words, and phrases using a shorthand system based on phonetics and alphabetic symbols. As the reporter keys in, a paper tape that contains the shorthand notes is generated. The reporter produces a transcript from these notes by one of the following four methods:

1. Personally reading and transcribing the notes.
2. Having a notereader read and transcribe the notes.
3. Dictating the notes into a dictation unit and having a transcriptionist listen and transcribe the notes.
4. Utilizing a Computer Aided Transcription system, the notes are translated from a machine impulse which is recorded at the same time as, and along with, the hard-copy notes (Gales, et al., 1986).

### Court Reporting Education

As previously cited, Ward Stone Ireland was the first to train 30 teachers to pass on his methodology of machine shorthand to students using his innovative machine.

Since then, court reporting education has usually been restricted to a conservatory-training atmosphere in that most programs have been private and have concentrated only on those skills necessary to produce a court reporter (Court Reporting Inst., 1988).

Basic to court reporting studies have been machine shorthand methodology, typing, English, biology, and medical and legal terminology. Machine shorthand has been kept to a simplified system that mirrors traditional methods such as Gregg shorthand. In fact, it has professed to be even more simplified because, originally, long and short vowels were written the same. Hence, notes were context specific because "rat" and "rate" were written identically ("RAT") (Court Reporting Inst., 1988).

In the intervening years, machine shorthand has gradually predominated over pen and ink methods when a verbatim transcript was needed. However, it was peculiar to note that the Adjutant General's School of the United States Army was still training court stenographers using Gregg shorthand as late as the middle 1960s.

In recent years, programs have emerged in liberal arts environments in colleges and universities awarding associate and bachelor degrees in court reporting. The training of machine shorthand has always been geared to court reporting. One school has opened in California which specializes in training individuals to be manuscript transcriptionists with machine shorthand. It is believed that a stenotypist can enter data into a computer four times faster than a typical typist or word-processor trained operator. This translates into 60 pages an hour (without interruptions) as opposed to 12 pages an hour. The lucrativeness of this project is obvious (RapidText: Preliminary Training Materials, 1989).

The trend in court reporting education seems to be toward a degree-oriented curriculum and viable alternatives to machine shorthand uses. Several schools offer alternatives, such as scopist and hearing reporter, to individuals who wish to remain in the machine shorthand field but do not wish to be full-fledged court reporters. It is believed also that many individuals who begin court reporting eventually go on to become lawyers or paralegals. Often these individuals use court reporting as their financial basis while attending law school (Knapp, 1984).

Court reporters have always conducted themselves in business as professionals. Court reporting professionals regard the educational sector as very important, because they believe the only one who can do the work of a qualified

court reporter is another trained court reporter. It has been important to the schools that attempts to replace the reporter with video or audio records have met with little success mostly because they were not as exacting or certifiable as trained and qualified court reporting school graduates (Silver, 1986, p. 28).

National Shorthand Reporters Association (NSRA). The NSRA has been instrumental in improving the quality of machine shorthand training. Under the guidance of New York's Professional Examination Service (PES), NSRA created its Registered Professional Reporter (RPR) and Certificate of Merit (CM) examinations, as well as a comprehensive job analysis and domain listing for court reporting (Gales, et al., 1986, p. 1). The following is a statement published by this organization which provides its purpose and goals:

The National Shorthand Reporters Association (NSRA), a national professional organization with a membership of close to 20,000 court and general shorthand reporters, was founded in 1899, to secure the benefits resulting from organized effort, to promote and maintain proper laws relating to shorthand reporting, to advance the interests of the shorthand reporting profession, and to enlighten the public as to the importance and value of the services performed by the competent shorthand reporter (NSRA, 1988, Approval: Objectives, Benefits, and Procedures).

According to a study commissioned by NSRA, Schleich (1986) attested that the Human Resources Committee of the NSRA believed there was a "growing concern over the continued shortage of qualified reporters throughout the United States" (p. 1).

Her survey (43 percent of the forms were returned) of school administrators pointed out several factors:

1. While 30 percent of the schools' enrollments remained static, almost half dynamically increased in enrollment.

2. A large number of respondents, 70 percent, indicated a dropout rate of over 50 percent of those students who were enrolled in programs. Further, almost one half of this 70 percent group said they had less than 20 percent complete programs.

3. Over 80 percent of the schools surveyed had instituted some sort of motivational program to combat their high attrition rate. Approximately 40 percent of the schools which had motivational programs had increased enrollment while the other half showed a decrease in enrollment.

4. Although the average length of reporting programs was found to be two years, most students, over half, took longer to complete the program.

5. Average student age was 16 years old.

6. Over 75 percent of reporting programs had less than 100 students.

7. Programs employing full- and part-time instructors ran over 70 percent.

8. The two most common student recruitment efforts were high school career fairs and local newspaper advertisements.

9. Over 50 percent of the schools' enrollments were attributed to Direct Mail advertising.

10. Over 70 percent of the schools offered alternative educational programs such as legal/medical/executive secretary, word processing, paralegal, note reader, scopist, and legal office specialist.

11. Respondents agreed (66 percent) that educational background had an effect on success in court reporting, citing language skills as important academic assets. However, many administrators believed that manual dexterity played an important part of court reporting success, but it did not specifically relate to academic achievement.

12. Remedial programs were offered by 65 percent of the respondents.

13. A large majority (88 percent) contended that a mentoring program was an asset to the potential court reporter.

14. Finally, Schleich reported that more research needed to be done in the area of screening processes concerning potential student court reporters. Also, querying practicing court reporters for their qualities and characteristics was needed, and this information would help the educational environment. "We also learned that even though we know a great deal more about reporter education now, there is still a considerable amount to be researched and investigated" she concluded (p. 1-5).

The day-to-day responsibilities of court reporting were presented by Mary Knapp (1984) in her book, The Complete Court Reporter's Handbook. Knapp had been a court reporter for several years. She then opened and ran a school of court reporting. Knapp warned would-be court reporters that the road was tough, and only the best survived. Her book also concentrated on the forms necessary in court reporting.

The NSRA published a directory and registry of its membership entitled Membership Directory and Registry of Professional Reporters (1986). This publication listed its members and their status within the organization. NSRA members could take a Registered Professional Reporter's or Certificate of Merit examination. These tests, when passed, attested to the individual's court reporting skills.

### Growth and Development

Court reporting is a lucrative vocational field of study. Few vocational programs afford the graduate such high-paying opportunities as court reporting. It is estimated that beginning reporters make from 20- to 50-thousand dollars a year. Experienced reporters have reported such high earnings as ninety-thousand dollars in one year. Moreover, a free-lance reporter can work when he chooses. Many free lancers work right out of their homes, making court reporting ideal for homemakers who do not have a lot of time to expend outside the home environment (Court Reporting: A career for the future, NSRA, 1986).

Two types of court-reporting schools exist today. One is the conservatory school in which the curriculum is usually structured around daily contact and confined to court-reporting subjects; the second is the liberal arts school, in which the curriculum is usually structured around a liberal arts program, as well as a core of court-reporting subjects. Typically the latter school can grant a degree, while the former usually does not. Some colleges, especially community colleges, have found it necessary to expand their two-year programs into 3- and 4-year programs, because they were not able to furnish the intensity of learning necessary to acquire court-reporting skills.

Board on Approved Reporter Training (BART). BART was created by NSRA to establish standards and accredit schools of court reporting. Its statement is as follows:

In order to insure that qualified and competent reporters would continue to enter the profession and would continue to maintain the same high standards and ethics, NSRA embarked on its program of assessing, and granting approval to, court reporter training institutions. NSRA intends for its approval of these institutions to be identified as synonymous with excellence by assisting good court reporting schools in becoming better schools, by setting high standards to which all court reporting schools can aspire, and by assuring the public of the high quality education offered. Towards this end, the Board on Approved Reporter Training (BART) was formed to act upon applications made to NSRA by institutions which desire approval of their court reporter training programs (NSRA, 1988, Approval: Objectives, Benefits, and Procedures).

Meeting in June and December each year, BART has seven members made up of members of the court reporting profession and members from institutions that already have gained NSRA approval. Additionally, BART's purpose was set forth by the NSRA as follows:

BART is primarily a policy- and decision-making body, it has developed General Requirements and Minimum Standards, the criteria against which all programs are measured; it rules on the eligibility of, and determines the degree of compliance with the minimum standards of, all institutions which have made application to NSRA for approval; it publishes and makes available to the public a list of schools whose court reporter training programs have met the established Standards, and, it conducts an annual Teachers Workshop and a Student Seminar (NSRA, 1988, Approval: Objectives, Benefits, and Procedures).

On a Grant of Approval from NSRA, an institution was considered an approved program of court reporting for four years. After four years, the school could ask for reevaluation.

BART, among its criteria for approval, suggested a curriculum that has become a standard not only for approved schools, but non-approved schools as well. This minimum criteria spelled out the curriculum for approval as follows:

EDUCATIONAL PROGRAM. All graduates of the approved court reporter training program are required to satisfactorily complete the following offered courses of instruction:

A. Court Reporting Procedures

1. Role of the reporter in:

- a. Trials
  - b. Depositions
  - c. Administrative Hearings
2. Transcript preparation and format -- the student shall be required to type at least ten (10) pages of transcript taken from simulated or actual deposition or courtroom setting in two (2) hours or less with 95% accuracy
  3. Proofreading
  4. Instruction in dictating equipment and writing for a notereader and computer
  5. Marking the exhibits
  6. Indexing and storage of notes
  7. Reporting techniques such as when and how to interrupt a speaker, obtain spellings of proper names, identify speaker in a multispeaker situation, etc.
  8. Instruction in the proper use of library and reference materials including how to research citations
  9. Instruction in the NSRA Code of Professional Responsibility (see Appendix)

**B. English**

1. Rules of Grammar
2. Spelling
3. Punctuation
4. Capitalization
5. Vocabulary (word knowledge)

(Inclusion of the English course(s) in a shorthand dictation course does not meet this requirement.)

**C. Anatomy and Medical Terminology**

1. Instruction in basic anatomy
2. Instruction in medical terminology

(Inclusion of the anatomy and medical terminology course(s) in a shorthand dictation course does not meet this requirement.)

**D. Law and Legal Terminology**

1. Civil and criminal law
2. The judicial system (discovery, trial and appellate processes)
3. The legislative process and Administrative Agencies
4. Legal and Latin terminologies

(Inclusion of the law and legal terminology course(s) in a shorthand dictation course does not meet this requirement.)

**E. Technology**

This shall be an overview in reporter-related technology, concepts, and vocabulary, and should cover at least the following areas:

1. Computer-aided transcription systems
2. Word processing systems
3. Video application for the court reporter

(This material can be included in other courses.)

F. Shorthand

1. For graduation as a court reporter, the student shall pass a minimum of two 5-minute tests on unfamiliar matter with 95% accuracy at each of the following speeds:

225 wpm Q & A (2 voice)

200 wpm Jury Charge

180 wpm Literary

2. Material used in testing of shorthand ability at incremental speeds shall be composed of materials with no less than 1.4 syllabic density.
3. The student shall be trained to develop accurate writing habits.
4. Read back of notes shall be a classroom activity.
5. Dictation materials shall include two- and four-voice dictation material as

well as literary, jury charge, legal opinion, motions, etc.

6. Any dictation class shall include only students whose tested writing speeds are within the same 20 to 30 wpm range.
7. Dictation material shall be of varied terminology.
8. New material shall be added regularly.

G. Typing

1. For graduation as a court reporter, the student shall attain a minimum of 60 net words per minute.
2. Evidence of meeting this standard shall be in the student records.

H. Internship

1. It shall be the institution's responsibility to establish an internship program, which shall contain:
  - a. Evidence of a minimum of forty (40) verified hours of actual writing time during on-the-job training.
  - b. Records to verify the internship experience.
  - c. This training shall not commence until a student reaches 200 wpm (excepting those localities where

- 200 wpm conflicts with existing laws or court rules).
- d. The student must not serve in the capacity of the actual reporter during participation in this internship period.
  - e. A minimum of 20 pages of transcription is required.
  - f. The transcript is produced for educational and grading purposes only and must not be sold (Board on Approved Reporter Training, NSRA, 1982, p. 26-9).

In "NSRA Approval of the School Program: Who Needs It?", Carol Coblenz (1989) revealed that a dichotomy exists concerning NSRA approval of a school program. On one side were the approved schools and on the other side were the schools which had elected not to seek NSRA approval.

In a study conducted by the Florida Shorthand Reporters Association, 20 percent of students surveyed indicated that approval was not necessary. However, were these students fully aware of the implications and criteria for NSRA approval? It would be more likely that they were more concerned in the "clout" this distinction would make on their careers (p. 36).

Arlene Sommers (1989) believed that dialogues between programs and degree-granting institutions promoted innovative concepts necessary to the future of court reporting schools. One such agreement between the Winter Park Adult Vocational Center (WPAVC) and Florida's Valencia Community College resulted in the creation of an Associate of Science Degree for court reporters. This relationship could not have been accomplished without the enthusiasm and commitment to excellence of WPAVC's Director, Kaye Chastain, according to Sommers. Sommers also predicted 4-year programs on the court reporting horizon (p. 35). Unfortunately no literature was found to speak for those schools which had not sought NSRA approval.

Coblentz (1989) thought accreditation was important because it was lucrative in attracting enrollment, NSRA tracked accountability through yearly reports, students experienced school pride, and future leadership in NSRA was created. Concluding her positive treatment of NSRA approval, she exhorted, "If our teachers and school administrators are encouraging their students to become RPRs as most seem to be, they, too, should insist that their programs attain approval for passing the minimum standards test for reporting programs. Doctors, lawyers, teachers, and their schools do it. Reporters and their schools should, too" (p. 36).

Continuing Education. Recognizing the need for continuing educational requirements of reporters, Jeffery Rossen (1989) pointed out the promotion of the external degree program offered by the University of Alabama for court reporters. Rossen thought that the program was working because of its flexibility. This program was a cooperative effort between the NSRA and the University of Alabama (p. 28. and Young-Johnson, V., 1988).

#### Laws

Many states have enacted laws governing court reporting. Usually these states require that a person cannot practice court reporting in that state when a certified transcript is required unless that individual is certified by the state to function as a court reporter. At the Federal level, a Federal certification examination must be accomplished, along with a record of experience, in order for the RPR to perform as an official of the court (Knapp, 1984, p. 14).

According to the NSRA Directory & Registry: 1988-1989 NSRA Membership Directory and Registry of Professional Reporters, Arkansas, California, Colorado, Georgia, Hawaii, Idaho, Illinois, Iowa, Kansas, Louisiana, Michigan, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, Oklahoma, Rhode Island, Texas, Utah, and West Virginia have Certified Shorthand Reporter's (CSR)

examinations. However, in Louisiana the examination was for all free-lance reporters--official reporters were exempt. Also, Nebraska, Rhode Island, and West Virginia's tests were voluntary. Therefore, 19 states, or 38 percent of all the states, required a fully mandated CSR. States without mandated CSR laws were as follows: Alabama, Alaska, Arizona, Connecticut, Delaware, Florida, Indiana, Kentucky, Maine, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Montana, North Dakota, Ohio, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Vermont, Virginia, Washington, Wisconsin, and Wyoming. The total of the states with no CSR examination was 27, or 54 percent of all the states. This was a clear majority without adding the District of Columbia, which did not have a CSR (p.xxvi-xxix).

Concerned about consistency, the NSRA's membership adopted the NSRA Code of Professional Responsibility in 1979. Ethically, this document provided a sincere professionalism by which a reporter lived and performed his chosen occupation, whether his individual state required certification standards or not (See Appendix B). The NSRA's Task Force along with the Professional Examination Service, a private, non-profit testing concern, published The Entry-Level Shorthand Reporter: A Job Analysis, in 1985. The Foreword of this study pointed out, "The resulting document represents the job-relevant experience of both freelance and

official court reporters, reporter educators, court administrators, and the legal profession. It describes the overall job functions and responsibilities as well as the underlying knowledge, abilities, and skills that are essential for an entry-level shorthand reporter."

States' court reporters, their state organizations, and the NSRA have been active to seek standardization through certification requirements. In this direction, the NSRA provided programs to improve the image of reporters and indicate levels of skills. These programs were as follows:

1. Registered Professional Reporter (RPR). "An RPR is a reporter who is skilled, knowledgeable, and dedicated to achieving and maintaining a high level of professionalism" (p. xxv). An RPR must pass a three-part skills test and the Written Knowledge Test (WKT).

The skills portion of the test is a dictation test of Literary matter at 180 wpm, Jury Charge at 200 wpm, and Testimony at 225 wpm. The WKT portion tests those areas of knowledge needed to perform the duties of a shorthand reporter, such as English, terminology, courtroom rules and procedures, transcript format, use of legal research materials, and professional responsibility (NSRA Registry & Directory, 1989, p. xxv).

The RPR has been sanctioned by the American College on Education and determined that this program is equivalent to 21 college credits.

2. The Certificate of Merit (CM). The next step after the RPR is the CM, which is similar to the former in scope, but the requirements were more stringent. The CM includes a skills--Literary matter at 200 wpm, Jury Charge at 240 wpm, and Testimony at 260 wpm--and a merit-level Written Knowledge Test. A CM certificate is an attainment of distinction (NSRA Registry & Directory, 1989, p. xxv & Rogner, 1985, p. 26).

3. The Certified Managing Reporter (CMR). The CMR program is an innovative attempt at providing a continuing education degree program for the court reporter. According to the NSRA:

The Certified Managing Reporter (CMR) Institute is designed to educate freelance and official reporters in the knowledge and professional practices necessary to become successful and competent managers--of courtrooms and court systems, of offices, and of themselves. In order to become certified, the CMR must complete four NSRA-sponsored modules on major aspects of management: Basic Management Theory and Practice, Personnel Concepts and Practices, Financial and Marketing Concepts and Practices, and Technology Concepts and Practices. Successful CMR candidates must also

participate in an internship and complete an independent study project (NSRA Registry & Directory, 1989, p. xxv).

4. The Certified Legal Video Specialist (CLVS). Started in 1984, the CLVS program certifies both reporters and non-reporters as "qualified to conduct and control the complex process of providing videotape services for the legal community" (NSRA Registry & Directory, 1989, p. xxv).

Accomplishing any of these programs is thought to enhance the credibility and esteem of the individual reporter. Without a doubt, the RPR and the CM is crucial validation of skills in those states that do not require a CSR (Lea, 1986, p. 16).

Official Reporting or an Officialship is the goal of many reporters. Mary Knapp (1984) maintained:

Judges often like to hire beginners so they can train them to do things their way. Other jurists prefer reporters who have had freelance experience or training by some other judge. Some judges prefer men reporters; others feel that women add class to the courtroom setting (p. 14).

#### Shorthand Methodologies

The genesis of machine shorthand systems owed a considerable debt to the pen and pencil methods of handwritten shorthand. Many of the principles, affixes, and

briefs were carried over to the machine. This fact contributed a great deal to machine shorthand's eventual acceptance. A close kinship was important. Today, machine shorthand still shows a resemblance to its brethren, but it has changed dramatically because the machine has more capabilities for faster note taking (Court Reporting Inst., 1988).

Early machine shorthand experts either read their own notes or trained note readers to read them. Many of the ambiguities inherent to English were solved by virtue of contextual extrapolation. For example, in the past only one representation (outline) was needed for "their, there, they're", because the operator could discern the correct form as he was translating the notes into manuscript form. Likewise, early forms of machine shorthand did not have long or short vowel distinctions. "Reed, red, and read" were written alike (Hagestrom, 1983, p. 42).

With the advent of the computer, it became obvious that writing words that sounded or looked alike and occurred often would not do without costly, extra time spent proofreading. It was crucial that these frequently occurring words be written distinctively in order for the computer program to decipher the word and translate it properly into English. Court reporters called these similar representations "conflicts" which needed to be written

differently, therefore, eliminating the conflict (Hagestrom, 1983, p. 42).

More and more the computer programs and computer hardware for court reporters were being updated, rewritten, and redesigned to reflect better translations and fewer untranslatables. Each reporter created an initial, personal dictionary telling the computer how he wrote his outlines. Nevertheless, these programs were based on lists--many, many lists. Many of the breakthroughs in computer translations were directly linked to the decreasing size of computer mass storage. Sophisticated use of algorithms played a part in translation, but most of the work was done by pre-prepared lists of words and word instances. An algorithm was loosely defined as "repetitive calculations used to find the greatest common divisor of two numbers" by Webster's New World Dictionary of the American Language. It followed that the more extensive the lists were, the more sophisticated the translations were (Shorak & Sobieski, 1988).

Court reporting schools have been acutely aware that in preparing students for the job market, computers would have to be taken into consideration. Whether the student would end up working on a computer did not matter because a "computer-compatible" system would also be appropriate in the non-computer environment. In fact, resolving conflicts produced, in the long run, more accurate machine shorthand writers. Therefore, machine shorthand methodologies in the

past ten years have gone to great lengths to include the phrase "computer-compatible". Upon investigation, though, computer-compatible did not mean that any one system was perfect; rather, the system had been reworked with computer compatibility in mind (Shorak & Sobieski, 1988).

A long-running standard, Computer-Compatible Stenograph Theory has survived many revisions. This system grew out of Stenograph Corporation's need to have a definitive system to market with its machine, the Stenograph. One important characteristic of this shorthand system was that each unit or lesson included a principle of English grammar, style, or punctuation, which in court reporting, cannot be reinforced enough. This system of shorthand jumped a large barrier when its authors, Mae Glassbrenner and G. Allen Sonntag (1986), decided to incorporate some advance principles along with heretofore basic principles (p. iii-ix). These inclusions supported the need for a codification of advance methods and knowledge.

Because of this system's ongoing commitment to change, it was a major area of consideration when developing an EMSD. The Stenograph Corporation's system and other basic methodologies shared many similarities making them consistent from one system to another.

Herman Miller's system, The Herman Miller Theory, was thorough but contained many conflicts. However, this system did equip the student with advanced learning after the

beginning methodology (Ninnich & Rasmussen (1985). Several texts were available, but Elena Rasmussen's (1985) Herman Miller Briefs and Phrases with Drills for Dictation stood out as one of the few texts that dealt with advanced concepts. Unfortunately, putting conflicts aside, this advanced system relied heavily on the use of asterisks (\*) to separate conflicts. In this connection, the parent organization, The Stenotype Company of California (also known as The Herman Miller Stenotype Corporation), marketed an annotated machine which split the asterisk key and relied on "bridged" keys to increase writing power. A bridged key was one that could be depressed with the same finger while it was already depressing another key.

By developing an advanced resource that was compatible to all systems, Herman Miller's was one of the outstanding resources considered by this author if only because of its maverick and nonconformist flavor. According to Miller, re-inventing the same systems that are prevalent would be a waste of good time. He believed that his system improved on other systems saving a court reporter time and effort. Detractors thought that his system relied much too heavily on rote learning, but many of his innovative ways of writing have been adopted by other systems over the years (Rasmussen, 1985 and Ninnich & Rasmussen, 1985).

A system which surfaced in recent years was Alan Roberts, John Walsh, and Jean Gonzalez's Computer Shorthand

Theory and Transcription (1984) (known as the Roberts system). The system is still evolving, and the authors are currently compiling a second edition. It was worthy of note because it tried to incorporate some advanced concepts as well as offering alternative ways to write outlines in some cases. This was the first text that promoted the concept that students can think or make decisions for themselves. Another asset was its approach to conflict resolutions. Its strategy tried to keep resolutions confined to one concept or system for consistency. A minor drawback was that this system did not address these conflicts enough.

Several volumes of dictation practice also exist for the Robert's system. Unfortunately, the advanced words and phrases are presented, but no key to writing them is included. Apparently, this task is left up to the school or the instructor.

Like Stenograph, this system was considered in the development of an EMSD. Many of the basic concepts share a consistency of writing with other known systems.

Another comprehensive method was the Merit Machine Shorthand Theory (1986). The Merit system was used by the Merit School of Court Reporting in California. Along with its basic texts, there was an intensive audio-cassette program that was available to other schools. Advanced features were given in an alphabetic listing which allowed the student to incorporate them as needed. This list was

compiled to meet the specific needs of the previously recorded material available in the program. In other words, if an advanced word did not appear in one of the study transcripts, it would not be in the listing, and this listing only included a rudimentary index of advanced words.

A well-defined system, Merit was consistent with other methodologies in basic concepts of shorthand skills and was another major consideration for the EMSD. Merit also had defined many advanced words in materials that are used at the advanced levels. However, it is crucial in arguing the need for advanced concepts, to note Merit offered alternatives or shortcuts in advanced learning that were different than its own original method. One such case was Merit's approach to numbers. Numbers were written one way, which was consistent with traditional methodologies, while in its advanced audio-cassette series, Merit offered a complete relearning of numbers as one-stroke briefs (Merit School of Court Reporting, 1986).

The Philadelphia Clinic Machine Shorthand Theory (1983) was another unique system. It seemed to avoid any in-depth look at conflicts, rather concentrating on writing speed through special techniques that border on intensive problem-solving skills by the operator. This system required students to reverse and transpose English letters and sounds mentally. It also proposed a finger shift of the home position which opened new possibilities for more letter

combinations and representations (Miller, Foster, & Fincun, 1983).

The Philadelphia system was the most innovative (most extreme), because its authors believed that students should not only be required to memorize concepts, but be able to relearn other concepts intelligently as well.

Like the Herman Miller system, the Philadelphia Clinic system created an exciting feeling of change--change from traditional methods of shorthand writing. While Miller relied on the heavy use of asterisks, the Clinic innovations caused, at first, startling alternatives. A student learning this method after completion of beginning concepts would have to incorporate sophisticated learning and cross-referencing techniques in order to utilize these concepts. For example, the traditional way to write a word such as "betting" would have been to double-stroke it as "BET/-G" because "G" precedes "T" on the keyboard and would be out of sequence. The Clinic system wrote "betting" in one stroke ("BEGT"), arguing that all that was necessary was to transpose the two letters. Once learned, the system worked well--except this transposition unfortunately puts some words into conflict status. By this reversal of letters, the new representation spelled another word or phrase. For example, transposing the "ing" in "bedding" ("BEGD") also created another word as well: "begged". Be that as it may, no system can be completely conflict free. Therefore, this

important system was considered in the development of an EMSD (Miller, Foster, & Fincun, 1983).

All of the preceding methodologies of learning basic machine shorthand had unresolved conflicts; some few--some many. Also, all of the preceding systems were basic machine shorthand methodologies and were rudimentary in their treatment of advance methods, with the exception of the Philadelphia system which did have advance methods. Further, it is unlikely that any system could ever be devised to incorporate every instance of conflict in the English language.

Advanced methods and concepts have usually been left to the expertise and knowledge of individual instructors and the available resources of the particular school. It follows that under these conditions advanced concepts and knowledge have been limited to the local educational environment.

Boasting a completely conflict-free system, StenEd has been actively lobbying schools to adopt its system (Computer Compatible Machine Shorthand for Expanding Careers, Ritter, B.L., 1986). In a letter sent out to school administrators, StenEd's Vice President, Chuck Ritter (1989), persuaded:

StenEd is the only court reporting theory that was designed from its inception to be conflict-free and thus the best for all computer technology--CAT, real-time, and other rapid text entry applications. All

other court reporting theories have made what are often described as 'band-aid' changes to a pre-computer theory. That is, they have improved their computer compatibility, often by borrowing from StenEd concepts and outlines, but are still inherently structured so that many conflicts simply cannot be eliminated. This presents quite a dilemma to graduates who purchase a CAT system and begin to interface with the computer. Even after they have struggled for months--in some cases for years--building a dictionary, they will, for their entire reporting career, waste unnecessary time in the edit process and can never--unless they unlearn a great deal of their writing habits--be real-time writers. Unlearning or relearning, as you know, is far more difficult than learning correctly in the first place (ltr, May 15, 1989).

What appears to be a truly conflict-free method has underlying drawbacks. For example, basic to this system is that most words were written out (StenEd writes "masculinity" as MAS/KAOU/LIN/TI, in four strokes, while other systems write it in two strokes: MAS/KLINT). The time saved is conspicuous. In StenEd, also, shortcuts are kept to a minimum. Another drawback is the need for an extra stroke to indicate capitalization, but in all fairness, most systems do not have that capability (Ritter, B.L., 1986). It is important to note that StenEd has been crafted to a

finite degree: Its methodology is excellently prepared, and its concepts are consistently appropriate. What is influential in this system is that there is no room for outside techniques. This unique learning system has its own beginning, middle, and end: It is the most complete system available.

A workable system, StenEd is appraised as a viable system of worth in the development of an EMSD. In its text, C. L. Ritter (1986) worked diligently to find every instance of a concept in order to have learners experience every nuance and characteristic possible. This is a large asset to students, because they are afforded an articulation of the sound from every direction. Students who miss a word in advanced work are not often heard to say as in other systems, "I've never heard that word before."

Another new addition to the growing list of alternatives was RapidText out of Irvine, California. This was a direct entry system geared more for professional manuscript preparation than for court reporting. The company's Vice President, Glory Johnson, reported that her company was working on a text to suit its computer system. Basically, an annotated shorthand machine keyboard was connected to a word processor such as WordPerfect, utilizing MS-DOS (Microsoft-Disk Operating System), and as the operator keyed in outlines, the RapidText program immediately translated them into English. Johnson also

claimed that once the basic keyboard orientation for RapidText was learned, any system could be used for direct translation as long as an individual's personal dictionary was available. Although RapidText is in the process of promulgating its own system, those who have already learned other methodologies can easily adapt to RapidText's entry system (RapidText: Preliminary Training Materials, 1989).

Digitext of California, a division of Wang Corporation, was another direct-entry system, again designed primarily for manuscript preparation and not court reporting. Like StenEd, most words were written out in syllables in this system. Digitext declared that trained operators can write any word in English and foreign languages because everything was written phonetically. Its system's approach to shorthand seemed to have come full circle back to pen and pencil. However, it is important to point out that this new direction machine shorthand was taking illustrated the diversity of opportunities available for the machine shorthand trained (Digitext, 1985).

#### Recent trends

Computer Aided Transcription (CAT). Advances in technology in the last ten years have begun to revolutionize the court reporting field. In 1985, the NSRA's report, CAT in the Courts: A National Survey, reflected the NSRA's dictum of a five-year program, begun in 1984, to encourage

practicing court reporters to adopt Computer Aided Transcription when producing transcripts. This report promulgated the results of its survey to identify the use of CAT by members and courts.

CAT systems virtually have eliminated the need for court reporters to type, or employ others to type, their transcripts. However, all reporters were not using CAT. The NSRA study confirmed what NSRA already expected, "...approximately 1 in 5 official reporters use CAT to produce transcripts" (p. 4). It was interesting to note that these data also indicated that of the two major groups, official court reporters and freelance reporters, the use of CAT systems was dramatically higher in the latter group.

It was significant that NSRA's (1985) study indicated no dramatic change in a court reporter's monthly volume produced. According to that study:

It is interesting to note that regardless of production method, the majority of official reporters (77.6% of CAT users and 69.5% of non-CAT users) are producing between 200 and 1,000 pages of transcript per month (p. 7).

M. H. Block (1985) explained the new concept of real-time reporting in his article in the National Shorthand Reporter entitled "Real-time Reporting as a Career." With the aid of a computer, a reporter's notes were instantly translated into English on the Judge's bench and counsels'

tables. Reading back and researching previous testimony were facilitated by this approach. In the past, reporters either had to read back a section of testimony, which took valuable court time, or had to provide the typewritten copy the next day. Providing copy the next day was known as "daily copy" (p. 20-21 and Marrone, N., 1989).

In 1986, the Courtroom of the Future, which was debuted in Phoenix, Detroit, and Chicago, was making news and caused the prediction that computer-aided transcription would "revolutionize" the field of court reporting. Essentially this system dispensed "real-time" (almost immediate) translations of testimony to the bench and counsels. "Real time" was a term created for immediate translation of stenographic notes. Up until then, a transcript could be several days in preparation. In fact, next day service or "dailies" was the best offered in the past--and at a price. The Chicago courtroom and two similarly equipped courts in Phoenix and Detroit are part of a \$75,000 experiment that may determine how the courtroom of the future will be set up (Karlovits, J.R. 1989).

Non-Shorthand Methods. Other methods of producing official transcripts have surfaced in recent years. Most of these methods can be grouped under one heading: Electronic Recording (ER). Some lower courts, or Courts of No Record, have utilized ER as a convenient record or backup to the proceedings should a question or need for a transcript

arise. There have been attempts to incorporate audio- and video-taped recordings in courts where an official transcript need not be produced. Other courts have instituted ER because no shorthand reporter was available to fill the position. Many courts that adopted these systems have since rejected them because: 1) an audio or video tape can be annotated without detection, 2) inaudible portions cannot be replicated to written transcript, and 3) an audio or video tape cannot testify to its own validity (Bryan, D.R., 1985; Gross, E.G., 1982; Wilson, J.B., 1982; & Parsons, J.B., 1981).

Miller and Fontes' book (1979), Videotape on Trial: A View from the Jury Box, was a venture into the positive aspects of videotaping in the courtroom. The authors were promoters of using videotape in the courtroom. Although they present setbacks to the concept of videotaping, they did not consider or discuss the legal setbacks that have occurred in superior courts that affect the use of videotape in courtrooms.

Several courts have been forced to overturn convictions because of the problems inherent in audio/videotaping testimony. Rogner (1985) reported that an attorney in his jurisdiction had been forced to protest to no avail a reversal against his plaintiff that had been overturned because of ER "Blanks, spaces, and inaudibles [inaudible word or words] in the transcript of the oral hearing," (p.

52). J.B. Wilson (1982) also cited the inadequacies of ER in her article, "Deus ex Machina is no Panacea--Again!" She noted that ER was gaining in Courts of No Record, because qualified court reporters were not available. Wilson listed the reports she found, all previous to 1980, while conducting her study in the State of Utah. She concluded that ER in Courts of No Record was appropriate, but not superior or equal to a qualified court reporter. Wilson wrote, "Overall, the staff agreed that the errors in the ER transcript outnumbered those in the reporter's transcript by more than four to one" (p. 20).

The NSRA's position was that ER, if necessary, should be administered by a trained court reporter. In many instances, both systems were used. Sandra McFate saw videotaping of depositions as a skill to be acquired by court reporters. She promoted the Certified Legal Video Specialist (CLVS) examination which had been established by NSRA in 1983. The Association's exact policy on videotaping was as follows:

NSRA is an active proponent of the use of videotape technology in connection with the pretrial preparations and preservation of testimony. It is the official policy of the Association to support and encourage the use of videotape when court reporters prepare a simultaneous shorthand record of the proceedings...(p. 30).

Warning reporters, Vice President May Smith Agren (1989) disclosed that ER was used in some courts because no one has been available to fill crucial positions in the courts. Agren believed that promoting the profession, suggesting changes to schools, sharing the history, and becoming involved in internship programs would increase the likelihood of more graduates (p. 51, 53).

One system, almost after the fact when discussing the different ways machine shorthand has been written, was Cipher-Scan. It was a mechanical device that, along with a computer, read the actual hard copy produced by a shorthand machine. Tom King of Cipher-Scan, Inc., vowed that Cipher-Scan will "know" a writer's dictionary after only three jobs are processed through his translation process, because his program is capable of remembering and classifying unique ways of writing as they are encountered (Interview, Jan. 20, 1989).

New Occupations. New and exciting career fields are opening for the machine-shorthand trained. Alternatives in recent years include closed-captioning for the hearing impaired, foreign-movie subtitling, live sports reporting on tote boards, and general manuscript preparation in the office (Jorpeland, M.S., 1982; & Block, M.H., 1982).

Digitext. As previously stated, this system is not geared for court reporting as much as it is in document preparation routine in the office environment. It argues

that a stenotypist can accomplish up to 60 pages an hour, while the traditional typist averages 12--without interruptions (Digitext, 1985).

Digitext's advance concepts were not considered appropriate for the development of an EMSD, because this system is written strictly in syllables--avoiding any advance concepts--and because this system does not cover many of the specific areas necessary to court reporting.

RapidText. RapidText is manuscript oriented. It claims:

RapidText is a new technology that is making it possible to input into word processing programs and take advantage of desktop publishing. Now you can input rapidly and incorporate graphics (illustrations and photographs) into documents. The use of RapidText is making more jobs available for people with court reporting skills. Moreover, documents can be produced faster than even before and can be more attractive (Preliminary Training Materials, 1989).

RapidText was another system not considered in the development of an EMSD. As of this study's completion, a published text was still in the developmental stage.

### Issues

High Attrition Rates. The NSRA in 1986 identified that a critical shortage of qualified court reporters existed in

Federal courts and lower court systems. In that same year, the NSRA published their report, which was the result of a survey sent to school administrators, citing the major factor contributing to the national shortage of court reporters was that schools were not producing enough qualified graduates (NSRA). Several reasons for the high attrition rate were lack of speed progression, family problems, lack of academic skills (most notably English), and a lack of awareness of the depth of commitment necessary to become a Court Reporter (Bichy, 1989).

Fighting the high attrition rate of students in court reporting programs was one of Cassie Bichy's prime concerns at Villa Julie College. She felt that students should be introduced to expectations, goal setting, and time management in order that they would become "committed". She advised, "What I have done is to create a situation in which the students have every possibility of being successful..." (p.38).

In "How to Motivate Reporting Students," Pauletta Morse and Diane Davis (1989) presented a good description of the characteristics of one program at Southern Illinois University at Carbondale which concentrated on student motivation. They wrote, "...the major factor in helping these students achieve their goals is for their instructors to find ways of instilling in them [the students] the one

aspect without which they will achieve almost nothing: motivation" (p. 40).

National Shortage. Haueisen (1975) discussed a pilot program in an Ohio school district to answer the critical shortage in that state for qualified court reporters. The pilot program was an intensive two-year court reporting curriculum directed at elevating and improving court reporting skills from previous levels (p. 16).

In another article, Haueisen (1977) reported that his court reporting program advertised itself because court reporting is a field in demand throughout the country.

In a continuing effort to attract students to become members, the NSRA periodically sent promotional material to schools to interest students. In 1983, the membership voted to relax its by-laws as follows:

Any student of shorthand reporting who is certified by a court reporter training program instructor or director as having enrolled in reporting school shall be eligible to become a student member. Student membership shall not be limited to students enrolled in NSRA approved program schools. A student member shall be eligible to renew his/her membership three times for a total of four years of student membership (Ltr, May 13, 1986).

Eileen S. Farkas (1989) implored working reporters to become active in recruitment and teaching. She believed

that no other better representative existed than the practicing reporter. She also pointed out that involved reporters would become better reporters.

A revealing study was conducted by Gary M. Cramer to determine the actual time it took for most students to complete a court reporting program. He surveyed 485 successful completers (172 responded) of the California Certified Shorthand Reporters examinations for November 1986, May 1987, and November 1987. The overall results of the survey indicated that most students, regardless of whether they were full-time, part-time, daytime, or nighttime attenders, took an average of 44 months to complete their programs.

Cohen and Weiss (1961) provided a handbook for students and practicing court reporters to increase their speed in machine shorthand. Speedbuilding was a mechanical process according to them. Therefore, the authors believed that practice and more practice would eventually lead to better and faster speeds.

Richard Featheringham (1989), in an article about the problem of increasing shorthand speed, used the technique of "Sneak Previews". These previews were projected visually or orally and were comprised of ten percent of the material to be dictated. He preselected these words for their uniqueness. "I use the word interesting," he stated, "because a word like hard or difficult tends to promote

negative images..." (p. 44). Addressing advanced concepts obliquely, he held that an advanced phrase can be presented during this preview phase in preparation for the actual dictation (p. 44).

In another article on shorthand speed, Featheringham (1989) explored the realm of "mental rehearsing of motor skills." He cited the need for routine rehearsal of skills to prepare the student for execution of those same skills (p. 48).

#### Summary

What became apparent after reviewing the literature available in court reporting was that the major issues were a national shortage of court reporters, the credibility and capabilities of court reporters, the adoption of CAT systems, ER's threat of encroachment on the field of court reporting, and continuing educational efforts.

The texts that existed for learning court reporting were at first traditional, but on closer observation, were diverse and, in some cases, innovative. It was apparent also that very few resources, on the whole, were available to schools and instructors for advanced concepts and shortcuts. The undercurrent here was the constant awareness that the NSRA's study essentially blamed the educational sector for not producing "qualified" candidates for entry into the field.

It was apparent that no EMSD existed in the educational sector, because these systems of learning machine shorthand were channeled to their own ends. The authors were hesitant to promote advanced learning, for to have done so would have implied that their basic system's presentations were faulty. Moreover, the trend appears to have been to incorporate advanced features in beginning methods as long as they did not cause a complete relearning of concepts or were not compatible with conflict-free writing. Also, it could be assumed that authors of beginning methodologies were aware that a large body of material existed for advanced words, phrases, and concepts in the possession of court reporting instructors and individual schools. Also at hand was the belief that instructors and individual schools would not collectively welcome advance techniques into their already standard curricula.

On the other hand, court reporters were not only hard workers but usually displayed an unusual esprit de corps about their chosen field. The current status of court reporting education, as the NSRA saw it, could be summed up by the remarks of NSRA's Immediate Past President, William C. Oliver (1989):

Educationally, NSRA is no longer in the business of 'repackaging old goods.' Admittedly, our new approach requires that reporters summon up more courage than is needed to recycle older, more familiar, learning

patterns. But if we truly accept lifelong learning and lifelong change as the keys to success, we will be linked, decade after decade, with the future (p. 26).

The attitude NSRA had taken toward the new horizons in court reporting was positive and refreshing while firmly recognizing the worth of its past. Court reporters did not plan to be eliminated due to obsolescence or lack of technical expertise. The field of court reporting was changing as change became available.

CHAPTER 3  
INVESTIGATIVE PROCEDURES

Introduction

This chapter includes the design and step-by-step execution of the plan of study; criteria used to determine whether the data are valid and reliable; how the information from the literature and the results from the survey were to be analyzed to attain the objectives, or respond to the research questions; and a brief summary of the chapter's contents.

Methods of Research

The design of this study incorporated three main phases:

1. Validation,
2. Distribution,
3. Analysis.

Phase One: Validation. A questionnaire, developed from a review of the current literature, provided information the researcher desired according to the premises and questions raised in Chapter 1.

Prior to this questionnaire's distribution to the Program Directors of court reporting programs in the United States, it was sent to a panel of 17 experts from five western states for validation purposes. Once the field

testing of the questionnaire was returned, it was revised accordingly and titled "Eclectic Machine Shorthand Dictionary Questionnaire" or EMSDQ (Appendix A).

Demographic information was asked in order to obtain data about the schools and programs queried. These questions asked specifically what shorthand system was used, what type of degree or certificate was granted, and how long the program or programs were in duration.

The remaining questions were specific to the study's premises and questions which are outlined in detail in the next chapter.

A cover letter was then prepared (Appendix A) to explain the nature of the study and its importance to the field of court reporting and addressed to the Program Directors or Administrator of a court reporting program. To this end, Jay L. Schaivo, Membership Director, NSRA, furnished a list of the accredited court reporting programs in the United States (Appendix D).

Phase Two: Distribution. The final questionnaire was then readied for distribution to all accredited court reporting Program Directors or their representatives in the United States. A list of labels was prepared and, at the end of May 1989, the EMSDQ was then sent by Priority Mail with an addressed and stamped easy return mailer. Recipients were advised, on the last page of the EMSDQ, of

the importance of their answers and given a response deadline of June 15, 1989 (Appendix A).

Phase Three: Analysis. After the June 15 deadline, the questionnaire was analyzed based on respondents' answers. Aside from demographic information which warranted specialized treatment according to the question asked, each question was tallied by percent of responses. The remaining questions were separated then by question number and response, and a percentile was computed by the following formula: Number of individual responses divided by total number of responses.

A percentage of 50 percent or larger was arbitrarily considered a consensus and used as the guide to the significance of the responses. The information was then utilized to:

1. Compare the assessments of court reporting program directors with the information resulting from the review of the current literature,
2. Categorize concepts and specific types of court reporting methodologies essential to advanced students in court reporting, and
3. Develop an Eclectic Machine Shorthand Dictionary based on the overall needs indicated by the review of the literature and the national survey.

### Summary

This chapter concentrated on the design of the study to develop an EMSD. This chapter presented the three phases of the investigative procedures used: 1) validation of the study and the survey instrument; 2) distribution of the survey instrument; and 3) analysis of the review of the literature and the data extrapolated from the EMSDQ which provides the foundation for Chapter 4's discussion of the results.

## CHAPTER 4

## RESULTS

Introduction

This chapter presents the results of this research study concerned with the development of an Eclectic Machine Shorthand Dictionary. The results were analyzed regarding the questions being investigated, and the results regarding interactions among the objectives and research questions. This chapter also presents results or findings on matters not planned as part of the study but which were uncovered in the investigation's course and which are relevant; and concludes with a brief recapitulation of this chapter's main contents.

Literature Review Results

The review of the literature in Chapter 2 revealed a need for a student court reporting dictionary comprehensive to the most common and most popular methodologies. Even though few advanced resources exist, no comprehensive resources available to all of the most common and most popular methodologies were found.

Further, it was interesting to note that there were very few resources available that suggested any guidelines in the presentation of advanced material to be learned.

Regardless of whether a program used advance machine shorthand concepts, it was important to define the appropriate place in a curriculum for medical testimony, legal testimony, and jury charge testimony. StenEd and Roberts have advanced material available but do not dictate sequence of presentation. StenEd, a system that leaves little room for alternative ways to write shorthand outlines, provides the most comprehensive resources. Roberts' well-prepared texts do not, once past the beginning system stage, give any indication of how these new vocabularies are to be written other than what has already been learned.

The literature review also indicated that developing an EMSD would be desirable and in the best interest of advanced court reporting education, mainly because such a resource does not currently exist. Also important to this discussion is the information that court reporting programs experience very high attrition rates.

According to the 1986 NSRA study, one of the reasons school administrators felt that students exited was lack of speed progression, which a comprehensive advanced resource could alleviate. It is logical that if speed can be increased by advanced concepts and shortcuts, then the student, who has reached a speed barrier, can be helped over that barrier.

Sylvia Pollick, an accomplished court reporter and NSRA Certificate of Merit writer, believes that advanced shortcuts are crucial to writing faster and becoming a Merit writer. Stenograph's system has been rewritten to include advanced concepts right along with beginning methods. Robert's system, since it is a relatively new one, sees the need to incorporate advanced concepts as beginning concepts. The trend apparently seems to be that advanced concepts are welcome, but most program directors would rather these concepts be included in the basic system.

Since an eclectic dictionary does not exist, one should be developed to meet the overall court reporting needs of court reporting programs. In order to satisfy these methodologies, the EMSD should furnish alternatives to write a certain word or phrase. However, in most cases, the methodologies are similar in many basic concepts and in these cases alternatives will not be necessary. In this connection, it is important that the preface of the EMSD prepare the student user with advice on the selective incorporation of any word, phrase, or concept.

The user should also be cautioned that a word should not be incorporated recklessly. It is important that he "figure out" the reason for the creation of the outline in question, *i.e.*, the reasoning behind the way it is written or the prevalence of the occurrence of a specialized word or phrase. Admittedly, many of the words and phrases will only

occur in the special environments inherent to court reporting. Therefore, the user should be able to discern the purpose and underlying concept that are possibly at work. It is hoped that this method will promote a new and articulate awareness in the user which will cause him to better understand how he writes. In this way, he becomes a thinking writer instead of an automatic writer.

### Survey Results

From the list of approved schools furnished by NSRA (Appendix D), 83 questionnaires were mailed and 69 were returned. Two of the schools were eliminated from the results because they are Canadian schools, and the study was limited to the United States. The 12 remaining schools were contacted by phone.

The demographic information, Questions 1-4, disclosed from the EMSDQ is presented as a background and framework on which to build the study. The data are presented in percentage rank of responses. If unsolicited comments were made by the respondents, these comments are included immediately following the presentation of the percentage of responses, except for Question 21, which specifically asks for comments.

Question 1. Which basic machine shorthand system does your program utilize?

42%            Stenograph

22%	Roberts
20%	StenEd
6%	Digitext
4%	Merit
4%	Brenner
2%	Miller

COMMENTS:

"School is switching from Philadelphia Clinic to Stenograph in the fall."

"This school revised Roberts."

"We have made revisions to Stenograph's [system] to make it more computer compatible."

"Our own [system]--a combination of many."

"We will be switching from Stenograph to StenEd in September 1989."

"We devised our own [system] based on Stenograph."

"We have an instructor-revised version of Stenograph."

"Recently changed from Roberts to Stenograph."

Question 2. Does your school offer a degree or certificate?

75% offer an associate's degree

23% offer a completion certificate

15% offer a diploma

6% offer a bachelor's degree

## COMMENTS:

"Associate's Degree is for some students who are being taught out from a program we had when we were a junior college."

"Going from associate's degree to bachelor's degree."

Question 3. Is your court reporting program considered a 1-, 2-, 3-, or 4-year program?

83%	2-year program
12%	2½-year program
6%	3-year program
4%	4-year program
0%	1-year program

## COMMENTS:

"It does take the average student longer than two years to complete."

"Students have the option to continue beyond two years to develop shorthand skill."

"Two-year, but often takes three."

"We are in a pilot project in which CR students will enroll for first quarter (9 weeks) for English and typewriting, then begin 2½ years of specialization."

"Two-year program, but most take longer; at least one more 10-week quarter to achieve final speed requirements."

"Very few complete the course in two academic years. The majority need an additional half year or whole year."

"[Program is] competency based--2-3 years, whatever it takes."

Question 4. Besides Court Reporter Training, does your school offer other Machine Shorthand related programs?

65%	None
13%	Secretarial
8%	Hearing Reporter
8%	Scopist
6%	ER Technician
2%	Legal Specialist
2%	RapidText

COMMENTS:

"We have a complete supporting curriculum."

"We will offer CR Scopist and Rapid Text Entry in 1990."

"Occasionally a student uses the machine in Legal Secretarial. Our training enables graduates to become employed as hearing stenographers."

Questions 5 through 20 and the responses are arranged the same way in which they appeared on the EMSDQ which was mailed to Program Directors or Administrators of court reporting programs. A percentage of each response is given alongside each choice.

Question 5. Are your court reporting students required to maintain a personal Machine Shorthand dictionary of briefs or arbitraries?

56%	YES
44%	NO
0%	DON'T KNOW

COMMENTS:

"Yes, in [our system] only; they may use others contained in StenEd's Professional Dictionary."

"No, we have a school dictionary."

"Yes, according to [our system] and other computer-compatible words and phrases."

"It is suggested that students keep a personal list of any phrases or briefs that they themselves have invented or use often--some practice it--some do not."

"Our system, Brenner, includes one."

"No, but most do."

"No, we provide CAT dictionary based on [system] learned."

"No. Not required but most do! (In addition to the Brenner dictionary.)"

"Yes, they pick and choose from StenEd briefs and arbitraries the ones they wish to use."

Question 6. Are court reporting students required to assemble a Computer dictionary before graduation?

58%	YES
-----	-----

40% NO  
2% DON'T KNOW

## COMMENTS:

"Not required. We have a dictionary on one system that they may take with them."

"No, a copy of ours is made available to them."

"Yes, it's provided and given to them as hard copy and floppy."

"A dictionary is optional."

"They can either produce their own or make a copy of the one we have available."

"Available upon graduation."

"No, but they are given the option through job dictionaries in the X-Scribe computer system."

"Not required as yet, but recommended."

"No, but given the opportunity."

Question 7. In your opinion, are advanced briefs and concepts needed in Court Reporter training?

63% YES  
25% NO  
12% DON'T KNOW

## COMMENTS:

"Don't know. Perhaps some are for some students."

"We have it--most programs don't."

"Definitely beneficial to expedite writing--some individuals prefer phonetic writing which is not discouraged."

"I teach them but only high-frequency occurrences after [our method] is introduced."

"Not required, but students have the opportunity."

"Not needed--but helpful!"

Question 8. How would you rate the availability of published resources for Machine Shorthand advanced briefs and concepts?

28%	Poor
31%	Lacking
25%	Adequate
12%	Good
0%	Very Good
4%	Don't Know

COMMENTS:

"Poor, I like Wiley's books for concepts, but we could still use more briefs and dictation material."

"Good, for our [system]."

"Adequate; however, I am not aware of any for the [system] we teach."

"Confusing in most [systems]."

"Good, we use only the briefs published by the authors of StenEd. We do not believe in mixing [systems]."

"Seven schools use the Brenner system; although, we do not promote it, they discover its strengths through contact with other users."

Question 9. Are you aware of any universal advanced Machine Shorthand Dictionary which could be used with any beginning system?

71%	NO
14%	DON'T KNOW
15%	YES (4%, Stenograph; 5%, StenEd; 2%, TomCat; 2%, NAIT; 2%, Digitext)

COMMENTS:

"I don't believe it would be good. We use only the dictionary published by StenEd."

"No, but I think that StenEd could be."

Question 10. Does your school teach other concepts of writing after students complete your beginning system?

73%	YES
25%	NO
2%	DON'T KNOW

COMMENTS:

"We offer alternative briefs and phrases in the upper classes if they are interested in using them."

"Yes, only because we have many students who transfer to our school with various [systems]. Also we will offer a brief which does not conflict."

"Yes, the basic writing stays the same but writing rules are added (i.e., KP = ex is introduced in beginning methods; drilled on later.)."

"I'm not clear as to what you mean."

"Yes, but stressing computer compatibility."

Question 11. If you answered YES to the previous question, where are these concepts based?

77%	Instructor Resources
29%	Other (21%, school resources; 8%, other students)
14%	A Text (3%, NAIT; 3%, Digitext; 3%, StenEd; 5%, Phila. Clinic)
0%	Don't Know

COMMENTS:

"We get briefs from students."

"[We have] class discussions and trade-off ideas."

"Any briefs or phrases that other students have made up themselves are offered to the others."

Question 12. Please mark the areas you would have included in an Universal dictionary:

98%	General Phrases
90%	Jury Charge Terminology
86%	Medical Terminology
83%	Legal Terminology
70%	Technical Terminology (50%, not limited to any specific area; 2%,

Asbestos; 2%, Real Estate; 2%,  
 Insurance; 2%, Plants; 2%,  
 Economics; 2%, Congressional; 2%,  
 Construction; 2%, Geology; 2%,  
 Industrial; 2%, Directions)

0% Other

Question 13. Are students offered alternative ways to write particular outlines?

88% YES  
 12% NO  
 0% DON'T KNOW

COMMENTS:

"Yes, as long as they correlate with the principles of our [system] of writing and do not create conflicts."

"Yes--some, but not many."

"Some write out, some use briefs. We can only suggest and drill; they will be the ones to accept them into their writing style."

"No, generally not."

"Students are discouraged--stress orthodox principles for consistent writing."

"Yes, some."

"No, if the text shows two ways to write a word, I recommend that the student choose one and be consistent."

Question 14. Are students taught different methods of resolving conflicts after the beginning system is learned?

81%	YES
17%	NO
2%	DON'T KNOW

COMMENTS:

"Yes, we help transfer-in students resolve conflicts."

"Unnecessary!"

"They [students] are taught to resolve conflicts in [the basic system]."

"No, we have no conflicts with our [system]."

"No, everything is taught in [the beginning system]."

"Not Necessarily."

"No, their [system] should resolve conflicts."

"Yes, to some extent--but they must be compatible with StenEd."

"Yes, whole basis of this [system] is 'no conflicts'."

Question 15. Do students who complete your court reporting program write outlines practically the same way?

85%	YES
13%	NO
2%	DON'T KNOW

## COMMENTS:

"Yes, although some will branch out and use more briefs and or phrases than others."

"Yes, particularly since starting to use StenEd [system]."

"Yes with a little variation."

"Yes, not 100% probably--but close to it."

"No, court reporters are individuals first!"

Question 16. Do you think advanced Machine Shorthand shortcuts have the potential of increasing students' speed development?

63%	YES
17%	NO
20%	DON'T KNOW

## COMMENTS:

"No, they create hesitation in stroking if not included in basic [system]."

"No, because too many shortcuts break your writing rhythm."

"Yes, only if the students know the 'shortcut' inside out, frontwards, backwards, etc., etc."

"Most champion writers use very few briefs. High-speed writing must be fluent without hesitation. Briefs can slow a person down if they do not immediately come to mind."

"Don't know--depends on where they are offered in the program."

"Don't know. I read conflicting points of view on this in NSRA publications and hear discussions at NSRA teacher's seminars."

"Yes, but not all of them."

"Yes, as long as they don't conflict with other outlines. I am one who believes in drilling a lot. The student becomes programmed."

"Yes, with correlated drill material."

"Don't know--for some people--not for all!"

Question 17. Do you think advanced Machine Shorthand shortcuts have the potential of causing students to be less stressful?

52%	YES
27%	NO
21%	DON'T KNOW

COMMENTS:

"It depends on personality of individual."

"No, nothing helps there!"

"Don't know. I believe it depends on each individual student. Some of my students write almost everything out and do very well. Others use shortcuts and do well. Writing becomes very 'personalized'."

Question 18. Do you think advanced Machine Shorthand shortcuts have the potential of causing students to become better shorthand writers?

54%	YES
-----	-----

29% NO  
17% DON'T KNOW

## COMMENTS:

"Not necessarily--some students need 'shortcuts' more than others."

"Yes, if learned well both in writing and reading them."

"Don't know. Not necessarily. If phrases and briefs are not stroked absolutely accurately, they cannot read back--or transcribe--much less be translated by the computer."

"Not necessarily. People are different and react differently."

Question 19. Do you think a reverse dictionary, alphabetized by outlines and mirroring the main dictionary, would be useful to advanced students?

62% YES  
19% NO  
19% DON'T KNOW

## COMMENTS:

"Would be good for a scopist!"

"Yes, many CAT computer machines can provide this now."

"As a matter of fact, I tried to work one myself from our Brenner [system] book in alphabetized order by

outline, and it about drove me nuts. I quit on the letter 'C'."

"Yes, but limited."

"Yes, limited; for conflict resolution."

"If available--it is useful."

"No, StenEd has such a dictionary, which we have not found useful."

"Very minimal."

Question 20. Do you think advanced Machine Shorthand shortcuts have the potential of being detrimental to students' progress?

42%	YES
44%	NO
14%	DON'T KNOW

COMMENTS:

"Yes, if the student does not know how to write and read it perfectly."

"Yes, in some cases, my students have said, 'Yes', when I have asked this. It puts a great burden on some student's minds. Some students do not 'think' in shortcuts--others do."

"Yes, if they try to use briefs for too many words."

"Yes, if given too soon."

"No, not unless they don't know them well enough, and they hesitate."

"Don't know. In some cases, yes--others, no."

"No, if they incorporate the most commonly used ones only."

"No, unless students don't learn (memorize) them well enough to both write them very automatically and recognize them easily in reading the notes."

"No, students know what is comfortable for them to read and write and what is not. They can pick and choose the shortcuts that work for them and the ones that don't."

"Yes, If they become obsessed with learning shortcuts."

Question 21. What specific problem(s) do you perceive arising out of the use of advanced shortcuts?

COMMENTS:

"If students do not study and practice brief forms thoroughly but have the ability to stroke phonetically with accuracy and consistence, then they should abandon brief forms."

"Shortcuts should agree with [system] principles as much as possible."

"Very much interested in the Results."

"As with any arbitrary or technique, if it is not responded to automatically; it causes hesitation and slows the student down."

"Memorization causes hesitation, and memory fades without constant use."

"Students having to think about outlines lose speed."

"Students should be writing with speaker; not waiting to determine if phrase can be briefed."

"So much time could be spent learning these shortcuts, that the student would not learn to just write."

"I have had students who want a brief or short form for every word and phrase they hear, instead of being selective, and this has slowed them down a lot or they have been unable to read their notes because they can't remember what the short forms stand for. Our StenEd writers who use selected briefs but write lots of stuff out are much better at reading back."

"Students become so dependent on shortcuts, they do not do well on dense material that requires written-out outlines."

"Available time to master such phrases and shortcuts is time consuming. When trainees write, they think of phrases they missed or shortcuts they could have employed. Make the shortcuts available and let learners select what suits their needs."

"Many students do not want the responsibility of their own learning and tend to shut the system down."

"Sometimes students have difficulty with 'dense' or literary material if they rely too heavily on shortcuts."

"If students try to use shortcuts, but do not learn them well, they become confused, stop to think what the shortcut is rather than instantly reacting and end up dropping words. In such a case, they could have been better off by stroking the word out. Too many shortcuts--half learned--can be as bad as too few."

"Students tend to 'gather' briefs and try to memorize them, which often results in retardation rather than gain in terms of progress."

"Some students may 'create' a shortcut on the spot--then in transcribing, they may not remember what the shortcut meant."

"While I do feel that advance machine shorthand shortcuts can increase speed, I find that the students sometimes become careless in their writing habits. I find most students are relying on the shortcuts and can't write phonetically when confronted with unfamiliar terminology."

"None that I can think of right off hand."

"Takes longer teaching time; less time available for speed building."

"Having a few are great; too many creates confusion and are too easily forgotten."

"We use a [system] that originated with Stenograph's [system], but then we modified it. Your briefs would have to mirror our basic writing. How is that

possible? I'd like to see anything you produce. Your questions are interesting."

"If not chosen wisely and learned properly, advanced shortcuts can lead to hesitation in writing and conflicts."

"Infrequent use--forget the brief."

"Could cause hesitation."

"More possibility for conflicts."

"I think it is important to expose the student to these in [system]. In my [system] classes, I drill a lot of arbitraries and phrases; therefore, the student becomes programmed just like a computer, in the early stages. If something is learned in [system], no time or effort will be wasted in changing--which is sometimes difficult."

"Shortcuts are all right as long as the student does not have to stop and think about it. If it is learned in [system], it is set in a student's mind. Thank you for including me in your survey."

"Our students learn Digitext. In this [system], we also have, and use, the Digitext Dictionary."

"None--but repetitive usage important to learn the outlines (advanced) in the beginning. Please send me results."

"I believe some students try to rely too much on shortcuts to avoid stroking out multi-stroke words and then ultimately have trouble reading the notes they've written."

I've seen this with some students who seem able to write the material but then don't recognize their 'shortcuts' when reading them. Not all unfamiliar technical terms, proper nouns, etc., can be written in just one or two strokes if the student is going to be able to read and transcribe them accurately. There is some limit to ability to memorize 'shortcuts' if too many get involved."

"Until a student feels the 'need' for a shortcut of a word or phrase encountered often, he will not learn it. What is a shortcut for one may not be for another. The best I can do is to tell them the shortcut is available (introduce them) and let them pick and choose the ones they need. I have come to this conclusion after many years of struggling with this problem. P.S.: I will eagerly anticipate the results of this questionnaire."

"Introduced too soon, they can confuse writer. Every [system] should offer the basic sound first with definite prefixes and suffixes and root strategies before going to advanced phrases, etc. Each writer should have the option of stroking out before shortcuts!"

"Getting the student through the change. After a student has learned a specific way to write an arbitrary, phrase, or word, they have a difficult time changing that. From my experience, it can be done (change) but is difficult. And in a speed crunch (fast testimony) most all people use the first thing they were taught."

"When a student has to think of the shortcut or brief, he or she tends to drop many words."

"Hesitation in writing. Throws students out of rhythm if the first word of a 'shortcut' phrase has been written and then the writer hears rest of phrase."

"Writing an outline too many different ways."

"Some students can't handle advanced shortcuts since it causes them to hesitate--these have to be used 'cautiously' and 'selectively'! Some students prefer to write it out."

"If a student thinks that speed is achieved by using shortcuts."

"If a student tries to use too many and their flow of writing is hampered."

"If there are computer conflicts in using some shortcuts."

"If someone does not know abbreviation, etc., thoroughly, hesitation in writing will result--the downfall of any writer. Also, all briefs must be easily read. If someone only practices writing a brief and not also reading it, transcription problems arise."

"They cannot be forced on students. Our philosophy is to offer the outlines and dictate the 'phrases' in drill. However students want to 'keep up' is their personal choice--short cut memorization is not for all students. Some do better by writing everything out."

"If the outlines for arbitraries, etc., require 'thought' or longer reaction time, it can slow a reporter more than writing phonetically. Any 'shortcuts' have to be automatic."

"There should not be a problem if students are consistent in their writing and the advanced shortcuts are not conflicts with other words."

"The advanced shortcuts might not be based on our Stenograph [system], and this could cause some confusion. Would appreciate a copy of the results."

"If not included in writing [the basic system], advanced concepts are memorized and not part of the 'foundation' of writing by sound. As with any memorization, 'recalling' the outlines creates writing hesitation, thus slowing speed development."

"It takes a lot of practice to replace old [system] with new. Under pressure, most writers will revert to old. Also choosing one over the other may reduce writing speed."

The following summary of results can be gleaned from EMSDQ: Stenograph appears to be the most used system by court reporting schools (42%) followed by Roberts (22%) and StenEd (20%). However, several schools that cited Stenograph commented that they had altered the system to suit their needs.

Of the respondents, 75 percent offered an associate's degree, while 23 percent offered a certificate of completion, and 15 percent gave a diploma. Some schools offered more than one type, but the trend toward a lengthening of a court reporting program is reflected in the fact that 6 percent of the respondents offered a bachelor's degree.

In Question 3, the respondents demonstrated that most court reporting programs are regarded as two-year programs (83%). But in the comments, it became clear that 2 years may not be long enough for the average student to progress to a level of proficiency necessary in court reporting.

Very few programs offered alternatives to court reporting (65%). Of those that offered alternatives 13 percent cited secretarial followed by hearing reporting (8%), scoping (8%), ER tech. (6%), legal specialist (2%), and RapidText (2%).

Also, it was clear that a majority of the respondents were in agreement in the following matters:

1. Students are required to maintain a personal dictionary.
2. Students are required to have a computer dictionary.
3. Advanced briefs and concepts are needed.
4. Advanced resources are poor or lacking.
5. No universal dictionary exists.

6. Schools teach other concepts of writing after a beginning system is learned.
7. Most advanced concepts are instructor generated.
8. An universal dictionary should include general phrases, jury charge, medical, legal, and technical terminology.
9. Students are offered alternative outlines.
10. Students are taught different methods of resolving conflicts after original concepts.
11. Completing students do write practically the same way in the same program.
12. Advanced machine shorthand shortcuts can potentially increase speed.
13. Advanced machine shorthand shortcuts can potentially alleviate stress.
14. A reverse dictionary along with a regular dictionary would be useful.

Also, many respondents were in agreement that any shortcut or concept is worthless unless it is learned well, that resolving conflicts is important, that new techniques should be learned at the beginning because time is precious, and that students as a source of learning are a valuable asset.

In order to create an Eclectic Machine Shorthand Dictionary, several concepts needed to be outlined and were included as follows:

1. A complete listing of common abbreviations, briefs, or arbitraries.

2. In the case of an advanced word, phrase, or concept, several entries would be included to indicate a word or phrase's transition through past tense, plural, third person singular, special usage, and, in some cases, ungrammatical occurrence. The later example needed to be included, because it could occur in verbatim testimony. Conversely, some examples were not explored, which it is hoped will cause the user to assimilate previous examples and be able to detail them on his own.

3. One-stroke phrases were explored to try to contain as many elaborations as possible. Again, some were not detailed to promote problem-solving skills.

4. A comprehensive list of medical and legal words and phrases was compiled and added to the dictionary with suggested shortcuts. In some cases, shortened terms were still included to indicate that no shortcut existed. Further, some words and phrases were not included because it was adjudged that these words and phrases were not common enough to warrant inclusion.

5. A Foreword was written for the EMSD to advise the user of basic concepts, conflicts, and the general

overall rule that the dictionary was primarily a resource. As a court reporting resource it was explained that it should never be construed as law. A resource is meant as a help, in this case for resolving conflicts and promoting faster writing on the shorthand machine. The user was advised to rely on basic, learned concepts when in doubt.

6. In many cases, different ways of writing the same word or phrase were included so the user could choose the best way to write a new outline considering his beginning concepts and the way he currently writes shorthand. Also, many choices were given if there were more than one way to write a particular outline. It was ascertained that some people prefer to write a word one way, while others another. For example, "amity" could be written "A/MIT" or "AM/IT" or "AMT" depending on preference and conflict. Also taken into consideration was the fact that some people hear words and phrases differently than others. Moreover, the inclusion of an emphasis on the correct pronunciation of a word or phrase was attempted. For example, the long "a" sound in "strength" and the short "i" sound "finance" were stressed.

7. Lastly, a second, reverse dictionary was created in order to provide a complete listing of the words and phrases in shorthand order to facilitate the research of an outline. One such use of the reverse dictionary would be to test quickly whether a new outline either from the

dictionary or created by the individual would conflict with other outlines already in the individual's repertoire.

#### Summary

In retrospect, this chapter discussed the results of the literature review and the results of the EMSDQ. Interactions among objectives and research questions also were discussed to include findings on matters not planned for by this study but relevant to this study. The information from the literature review and the data from EMSDQ were primarily presented categorically so that conclusions and recommendations could be drawn and discussed in the next chapter.

CHAPTER 5  
SUMMARY, CONCLUSIONS, AND IMPLICATIONS

Introduction

The summary, conclusions, and implications drawn from the analyzed data in Chapter 4 are discussed in this chapter. The summary, conclusions and implications were used to develop an EMSD (Appendix E) identified as needed in court reporting. Also discussed are the conclusions drawn regarding the research questions as stated in Chapter 1; conclusions regarding matters not originally planned as part of the study; a discussion of the conclusions, including implications and indications for present and future practices, and for additional needed investigations. The chapter concludes with a brief summary.

It appears that court reporters are not threatened with technological extinction. As new advances in technology are discovered, the trend is toward welcoming the new technology as a way to make the job of the court reporter faster and less tedious. Like other professions, expertise is a continuing, life-long learning process.

Summary

This study exposed the need for an Eclectic Machine Shorthand Dictionary to increase the resources available to

the advanced student and studies in court reporting. It was interesting that most of the program directors were in agreement that court reporting learning is unique in that it relies heavily on rote-learning techniques. Many of the directors were interested in new methods to alleviate problematic results such as high attrition, and lack of expertise that are inherent to most court reporting programs.

### Conclusions

It was evident from the literature that no EMSD was available. Moreover, the EMSDQ revealed that program directors perceived a need for such a resource in their programs for advanced students.

After considering the major methodologies in beginning court reporting education and the responses from the EMSDQ, it was apparent that the EMSD should contain the following:

1. A section explaining basic principles (included in the Foreword of the EMSD).
2. Several choices for an advanced concept if several choices existed. These choices would also oblige educators and learners to select, according to their system, the best concept for their needs.
3. Repetition of outlines in the phrases in which they might occur which would enable learners to practice right from the dictionary.

Finally, it was important to consider all of the major methodologies in order to compile an extensive list of advanced shortcuts to promote the speed and accuracy of the advanced learner regardless of the original system learned. The review of the literature and the EMSDQ were adamant that what is learned must be learned well to the point of becoming automatic. Therefore, though some outlines would be learned by rote, most of the advanced outlines were conceptual, that is, the same pattern was followed through for words and phrases of a similar nature. Again, it was important that the instructor and learner be cautioned to select what would work best for them and their system.

In summary, it was concluded from the review of the literature and the EMSDQ that no Eclectic Machine Shorthand Dictionary for the training and use of court reporting students existed. Further, it was concluded that there was a need for a comprehensive machine shorthand dictionary. Finally, an EMSD was created (Appendix E) considering concepts and types of study and testing methodologies that emerged from the review of the literature and the EMSDQ.

#### Implications

It is important to the field of court reporting that resources such as the EMSD be available to give the student reporter and the professional reporter the material to continue and promote the learning process in school and in

lifelong learning. It is necessary for a reporter to "think on his fingers" without hesitation. If a reporter is not exposed to "thinking on his fingers" while in school, he must acquire this important concept in the work environment. Several program directors indicated that they did not approve of advanced shortcuts but readily admitted that students either did them anyway, or their systems were altered or instructors were allowed to present them as part of the overall learning process.

This research also demonstrated that it is necessary for a qualified reporter to possess an extensive vocabulary. Even though some words are indigenous to a specific area, such as bankruptcy court, students and reporters need to be equipped for all types.

It was realized that the EMSD was by no means complete with regard to all words and phrases, especially specific technical terminology. It was thought that, while important, these words needed further research and compilation in separate works because of their extensiveness and frequency of usage.

Finally, the major implication that this study revealed was that while rote learning was at the core of machine shorthand learning, students were adept at organizing different learning concepts, and their applications, as long as these concepts were well learned.

### Suggestions for Further Research

From the literature review and the comments on the EMSDQ, an investigation into the "speed plateau" or stopping point experienced by most advanced students would help educators develop ways to eliminate this problem.

Even though the NSRA's 1986 study pointed out that schools were not producing enough qualified candidates to enter the profession, this study queried educational administrators--not students. Also, if a shortage exists, a study that concentrates on practicing reporters and those who have exited the profession would ascertain the longevity of a court reporter and perhaps suggest ways to improve the situation if an exiting situation exists (Thomas, 1977 & 1979; and Thomas & Robbins, 1979).

Research into the appropriateness of a standardized curriculum and the requirements of such a curriculum needs to be done to clarify the current academic standards of most court reporting programs. For example, if NSRA mandates a 225 word minimum, does that exclude other shorthands? Also, if typing is no longer a strong requirement for practicing court reporters, given the advent of computers and CAT, need it be a strong part of a court reporting curriculum?

It also was apparent that due to technological advances and the encroaching Information Age, the amount of data a student must learn has quadrupled (Rader, 1981). If so, should curricula reflect that change? Likewise, research

should be done to clarify what information a student of court reporting needs to "know" versus that what he needs to "hear" and be able to replicate in transcription form. Consequently, this area should also investigate what is learned as opposed to what is retained.

Research and compilation of technical terms and how they are written in machine shorthand should be done to provide the student and practitioner with added resources.

Future investigations might also address the question of why so many schools decide not to ask for NSRA approval.

Even though NSRA has set certain guidelines on who should teach court reporting, inquiries into this area would benefit educational programs as well as the profession. For example, why are there few seminars in teaching methodologies for court reporting? Also, are court reporting instructors teachers who specialize in court reporting--or court reporters who teach?

#### Chapter Summary

This last chapter discussed a summary, conclusions and implications drawn from the analyzed data in Chapter 4. Further, this chapter discussed conclusions and implications that were used to develop a court reporting EMSD (Appendix E) identified as needed in court reporting. Also discussed were the conclusions drawn regarding the research questions as stated in Chapter 1; conclusions regarding matters not

originally planned as part of the study; and other conclusions, including implications and indications for present and future practices, and for additional needed investigations.

In brief, advanced resources are looked on by the field of court reporting as bearing strange gifts. On one hand they are needed; on the other hand, program directors look at them with trepidation, anticipating the fact that they could do more harm than good. However, if advanced resources are seriously used incorporating learning techniques that solidify the process, they can improve the speed, quality, attitude, and production of an advanced student in court reporting.

**PROGRAM DIRECTOR/ADMINISTRATOR  
Court Reporting Program**

As a Court Reporting educational professional, you are aware of the problems that face this unique field of training. I am doing research in the field of Court Reporting as part of my doctoral program. I would appreciate it if you could take a few minutes to answer the questions on the attached form, "Eclectic Machine Shorthand Dictionary Questionnaire."

Research is important to a field's creditability. Your help, I am sure, will help to promote Court Reporting studies, and possibly be instrumental in bringing about necessary change. As with any profession, it is important for changes to begin at a profession's core — the educational forum.

Your school's name and address was furnished to me by Jay Schiavo, National Shorthand Reporter's Association, Virginia Headquarters, for the purposes of this research study.

Your time is valuable, but I hope you will take the few minutes to complete the Questionnaire, fold it in half, staple it, and drop it in the mail. Your time will *not* have been wasted!

I intend to make the results of this study available to you upon its completion.

**WILLIAM CAMPBELL**  
Master of Arts, English  
Doctoral Candidate, UNLV

**Eclectic Machine Shorthand Dictionary  
Questionnaire**

---

**1. Which of the following Basic Machine Shorthand theories does your program utilize (please mark the appropriate box.):**

- Stenograph Computer-Compatible Stenograph Theory
- Computer-Compatible Machine Shorthand for Expanding Careers: Basic Theory (StenEd)
- Stenotype "Computer Compatible" Theory (Herman Miller)
- Computer Shorthand Theory and Transcription (Roberts), Roberts, Walsh, & Gonzalez
- Merit Machine Shorthand Theory
- Philadelphia Clinic Machine Shorthand Theory
- Other (Please Specify) \_\_\_\_\_

**2. Does your school offer (Please mark the appropriate boxes.):**

- Associate's Degree
- Certificate
- Bachelor's Degree
- Other (Please specify) \_\_\_\_\_

**3. Is your Court Reporting program considered a (please mark the appropriate box.):**

- 1-year program
- 2-year program
- 3-year program
- 4-year program
- Other (Please specify) \_\_\_\_\_

## APPENDIX A

## ECLECTIC MACHINE SHORTHAND DICTIONARY QUESTIONNAIRE Page 3

9. Are you aware of any universal advanced Machine Shorthand Dictionary which could be used with any beginning theory? (please mark the appropriate box.)

- YES (Please Specify) \_\_\_\_\_
- NO
- DON'T KNOW

10. Does your school teach other concepts of writing after students complete beginning theory? (please mark the appropriate box.)

- YES
- NO
- DON'T KNOW

11. If you answered "YES" to the previous question, where are these concepts based? (please mark the appropriate box.)

- A Text (Please Specify) \_\_\_\_\_
- Instructor Resources
- Other (Please Specify) \_\_\_\_\_
- Don't Know

12. Please mark the boxes next to the following areas you would have included in an Universal dictionary:

- General Phrases
- Jury Charge Terminology
- Medical Terminology
- Legal Terminology
- Technical Terminology (Please Specify) \_\_\_\_\_
- Other (Please Specify) \_\_\_\_\_

13. Are students offered alternative ways to write particular outlines (please mark the appropriate box.)?

- YES
- NO
- DON'T KNOW

## APPENDIX A

**APPENDIX B**  
**CODE OF PROFESSIONAL RESPONSIBILITY**

**NSWA Code  
of Professional  
Responsibility**

Adopted By Membership August 1, 1979

1. The shorthand reporter shall avoid any appearance of conflict of interest by conducting himself with impartiality toward all participants in every case. He shall refrain from the acceptance or extension of gifts or favors in connection with his work. He shall disclose to the appropriate authority existing or past financial, business, professional, family, or social relationships which might reasonably create an appearance of partiality.

2. The shorthand reporter shall preserve the confidentiality of information entrusted to his possession which is so classified and shall take whatever steps are necessary to insure its security and privacy. He shall preserve and file his shorthand notes in an organized manner so that they may be retrieved, if needed, at a later date. These notes shall be retained for a period of not less than five years, unless otherwise specified by law or rule of court.

3. The shorthand reporter shall contribute to the integrity and impartiality of the judicial process or of any other proceeding by conducting himself in a manner that is fair and courteous to all participants. If he has not heard or understood a speaker, he shall, calmly and without inflection, ask him to repeat himself, but shall otherwise make all reasonable efforts to avoid the unnecessary interruption of proceedings.

4. The shorthand reporter shall strive to accept only those assignments where his levels of knowledge, skill, and competency are such that they will result in the preparation of a complete and accurate transcript and shall, whenever possible, remove himself from an assignment where he believes his knowledge, skill, and competency to be inadequate. He shall recommend or assign another reporter in his place only if, in his opinion, such reporter has the knowledge, skill, and competency required for such assignment.

5. The shorthand reporter employed by or assigned to a court or other

government organization shall refrain from the improper use of public property, materials, facilities, supplies, or services for personal gain. He shall provide his time and services in return for the salary and fees received from his employer and shall assign a substitute reporter to replace him in his absence only with his employer's knowledge and consent.

6. The shorthand reporter shall act with diligence to complete and deliver transcripts in accordance with the provisions of court rules if applicable or within a reasonable time after they have been ordered. A determination of what constitutes "reasonable time" shall take into consideration such factors as the length of the transcript to be delivered, the transcript backlog experienced by the reporter at the time of placement of the particular order, the time available for transcript preparation, and the availability of a replacement for the reporter involved. The official court reporter with a transcript backlog shall give priority to the preparation and completion of his official transcript before undertaking any freelance reporting activities. The freelance reporter shall refrain from promising transcript delivery dates he cannot reasonably expect to fulfill.

7. The shorthand reporter shall prepare a true and accurate transcript that is neat in appearance and has proper paragraphing, indentation, marginal limitations, and number of lines. Except as specified by official rule, a full page of transcript should conform to the transcript format guidelines recommended by this Association, or the equivalent, and shall provide fair value to the user.

8. The shorthand reporter shall charge no more than a reasonable fee for those assignments where statutory charges do not apply. Determination of the reasonableness of the compensation requires consideration of many factors, including the nature of the services performed, the time required, the expenses to be incurred, the reporter's experience, ability, and reputation, and the value of the service to the user. He shall agree with the user in advance, wherever feasible, on the amount of compensation or the basis of compensation. Except to the extent that the basis or amount of the fee is established by law, the shorthand reporter shall set his fee in the exercise of his sole and independent discretion, and shall enter

into no agreement with any other reporter, express or implied, on the basis or amount of any charges to any user.

9. The shorthand reporter who plans to assign or refer to another reporter who is not employed or associated with him all or some of the work of an assignment shall, whenever possible, notify the user in advance of that arrangement and give the name of the reporter and his qualifications. The compensation of the reporters involved in such an arrangement shall be based upon a division of service and/or responsibility.

10. The shorthand reporter, whenever making public statements, announcements, or advertisements, shall provide truthful, accurate, and adequate information that does not deceive or mislead the public about his qualifications and the services he provides.

**Enforcement and Disciplinary Procedures**

The following procedures shall be followed in resolving complaints of unprofessional conduct made against any member of the Association.

**A. Filing and Investigation of Complaints**

1. All complaints must be in writing, signed by the person making the complaint, and addressed to the Executive Director of the Association. All complaints must contain the name and address of the person complained against, a description of the conduct complained of, and references to the specific provisions of the Code of Professional Responsibility involved in the complaint.

2. The Executive Director shall promptly acknowledge receipt of all complaints and shall provide a copy of these complaint procedures to the person making the complaint. If the complaint does not contain all the required information, the Executive Director shall advise the person making the complaint that further information must be provided before any further action can be taken, and shall specify what further information is required. No action (except the action specified in the following paragraph) shall be taken until all required information has been provided.

## APPENDIX B

3. The Executive Director shall advise the person making the complaint of his or her right, in lieu of filing a complaint, to request an advisory opinion from the Committee on Professional Responsibility on the question whether the conduct complained of is consistent with the Association's Code of Professional Responsibility, and shall not proceed further until the person has indicated in writing his or her desire to proceed with the complaint procedure rather than request an advisory opinion.

4. If the person making the complaint declines to proceed with a request for an advisory opinion, the Executive Director shall forward a copy of the complaint to the person complained against, along with a copy of these complaint procedures, and request that person to respond to the complaint in writing within thirty days.

#### B. Proceedings by the Committee on Professional Responsibility

1. When the thirty-day period has elapsed, the Executive Director shall forward the complaint, and the response, if any, to the Committee on Professional Responsibility. The Committee on Professional Responsibility may reach its decision based on the complaint and the response, if any, or may ask the Executive Director to obtain additional information. The Committee may also grant an opportunity for the person making the complaint and the person complained of to be heard either in person or through legal counsel. If the Committee determines there are disputed issues of fact that are material to its decision, it shall grant either party an opportunity to present relevant information, including documents and witnesses, and an opportunity to cross-examine the witnesses called by the other party.

2. The Committee shall thereafter prepare a written decision containing its findings of fact and conclusions. The Committee may recommend to the Board of Directors that the member be expelled or suspended from the Registry or the Association, or may order that the member be censured or reprimanded. No expulsion or suspension shall become effective unless sustained by the Board of Directors in accordance with the provisions of Article XI, Section 3(b) of the Constitution and Bylaws. Reprimands may be kept confidential if the Committee so directs.

#### C. Appeals

1. The Executive Director shall promptly send a copy of the decision of the Committee on Professional Responsibility to the person making the complaint and the person complained against, and advise them that the Committee's decision will become final (except for recommendations regarding expulsion or suspension) unless either party appeals to the Board of Directors within sixty days, in writing, specifying the grounds upon which the party contends the Committee's decision is erroneous and should be revised.

2. If no appeal is taken within the sixty-day period from a decision by the Committee on Professional Responsibility recommending expulsion or suspension, the Executive Director shall forward to the Board of Directors the record before the Committee and the Committee's decision. In such cases the Board shall decide on the record before the Committee whether to sustain the Committee's recommendation.

3. Upon receipt of an appeal within the sixty-day period, the Executive Director shall forward it to the other parties to the proceeding. Any other party to the proceeding may respond to the appeal within thirty days of receipt. When the thirty-day period has elapsed, the Executive Director shall forward to the Board of Directors the appeal, any response, and all other papers relating to the matter. The Board may decide the appeal on the basis of these papers, or may grant a request for oral argument made by any party. The Board may affirm, reverse or modify the decision of the Committee on Professional Responsibility; provided, however, that no greater sanction can be imposed than that recommended by the Committee on Professional Responsibility.

#### D. Costs and Expenses

1. All costs and expenses incurred by the person making the complaint and the person complained against shall be borne by the person incurring them.

#### E. Advisory Opinion Procedure

1. Any person may submit to the Committee on Professional Responsibility a written request for an advisory opinion on the question whether certain actions or conduct are permitted under the Association's Code of Professional Responsibility. The Committee shall give such guidance as is possible within the limitations of the information pre-

pared by the person. The Committee may make public such advisory opinions upon request or on its own motion for the general guidance of the profession. Upon request, the Committee shall keep confidential the identity of the person making a request for an advisory opinion. The Committee may in its discretion keep confidential the identity of the person about whose actions or conduct the advisory opinion was requested. The Board of Directors may review on its own motion any such opinions and adopt or reject them in whole or in part.

#### Professional Practice Objectives

1. The shorthand reporter will observe the law and maintain high standards of personal conduct.

2. The shorthand reporter recognizes his responsibility to the public interest and to his profession to contribute to the development and understanding of better ways to serve the interests of justice and to make a record of the proceedings that is true and accurate.

3. The shorthand reporter shall apply his knowledge and experience working in cooperation with the bench and the bar toward the improvement of the administration of justice.

4. The shorthand reporter should strive to perfect and enlarge his professional knowledge in addition to improving his skills.

5. The shorthand reporter who is employed as an official reporter shall recognize his responsibility and accountability to his employer and shall not undertake freelance work when such work conflicts with his official responsibilities.

6. The shorthand reporter should associate with organizations having as their objective the betterment of the shorthand reporting profession in the public interest and contribute his time and funds to carrying on the work of these organizations.

7. The shorthand reporter will give just recognition to the work of his peers without distortion or discrimination.

8. The shorthand reporter will not engage in commercial activities that conflict with his responsibilities to the persons he serves professionally.

## APPENDIX B

9. The shorthand reporter will seek the freest professional discussion of all theoretical and practical issues, but avoid personal invective directed toward others.

10. The shorthand reporter who holds an official position in a shorthand reporting association shall avoid the appearance of impropriety through the use of his position for self-aggrandizement.

### Transcript Format Guidelines

1. No fewer than 25 typed lines on standard 8½ x 11 paper.
2. No fewer than nine or ten characters to the typed inch.
3. Left-hand margin to be set at no more than 1¾ inches.
4. Right-hand margin to be set at no more than 3/8 inch.
5. Each question and answer to begin on a separate line.
6. Each question and answer to begin at the left-hand margin, with no more than five spaces from the Q and A

to the text.

7. Carry-over Q and A lines to begin at the left-hand margin.

8. Colloquy material to begin no more than 15 spaces from the left-hand margin, with carry-over colloquy to the left-hand margin.

9. Quoted material to begin no more than 15 spaces from the left-hand margin, with carry-over lines to begin no more than 10 spaces from the left-hand margin.

10. Parentheticals and exhibit markings to begin no more than 15 spaces from the left-hand margin with carry-over lines to begin no more than 15 spaces from the left-hand margin.

(In those states or jurisdictions with transcript format guidelines recommended or established by court or other applicable rule, such guidelines shall be observed.)

### Advisory Opinion in Clarification of Provision Number Seven of the NSRA Code of Professional Responsibility

In performing its duties under Article

XI, Section 3(b) of the Association's Constitution and Bylaws, the Committee on Professional Responsibility shall treat as mandatory and binding upon every member all provisions of the Code, except that compliance with the transcript format guidelines referred to in the second sentence of provision number seven of the Code shall be considered as recommended and not mandatory or binding.

In determining whether a transcript complies with the "fair value" requirement of provision number seven, which requirement is mandatory and binding, the Committee on Professional Responsibility shall consider, among other relevant factors, the custom and practice in the locality in which the member conducts his professional activity, and may consider the degree of compliance with the recommended transcript format guidelines.

May 2, 1989

Mr. Bill Campbell  
Clark County Community College  
3200 East Cheyenne  
Las Vegas, Nevada 89030

Dear Bill:

Your idea of producing an eclectic dictionary sounds great. I have often thought that such a dictionary is needed. The students at our school could really use a dictionary of this type, especially if it is to be as comprehensive as you've described.

Please let me know when this dictionary will be available. Good luck on your project. It is quite an undertaking.

Sincerely,

*Jean Gonzalez*  
Jean Gonzalez  
Curriculum Coordinator

APPENDIX C  
**RAPIDTEXT**

May 2, 1989

Mr. Bill Campbell  
Clark County Community College  
3200 East Cheyenne  
Las Vegas, Nevada 89030

Dear Bill:

It was with great delight that I heard of your project to produce an eclectic dictionary for the steno machine operator. Having been in the court reporting field for 17 years, I have seen the need for this type of publication.

This reference dictionary can be utilized greatly in the field of education for machine shorthand, for the working reporter both in court and deposition work, and now for the rapid data entry operator. Having dealt in each of these arenas in our profession, it will be wonderful to have a reference book to give this type of information.

Good luck on this project and looking forward to reading your dictionary soon.

Sincerely,

  
Glory L. Johnson  
Vice-President, Operations

Sole-proprietor of  
Johnson Court Reporting

18013 Sky Park Circle • Irvine, California 92714 (714) 261-6333

Wantagh, New York 11793

Bill Campbell  
Clark County Community College  
Court Reporting Program  
3200 E. Cheyenne Avenue  
North Las Vegas, Nevada 89030

Mr. Campbell,

I write this letter to support your dissertation research to produce a generalized dictionary for advanced students and practicing court reporters. A project like this has been needed for a long time as no resource exists to date with this kind of information which is critical to court reporting studies--which never ends.

I wish you luck in this monumental undertaking and look forward to the results.

Sincerely,

Diane Giagliano  
Certified Court Reporter

WILLIAM  
CAMPBELL*

## SPECIAL THANKS

I would like to thank all the wonderful students I hope I have helped along in their efforts of becoming professional reporters. I would not have been able to complete this text without their help. In fact, this text would not have been undertaken but for their desire to have a dictionary that would accompany and what they were learning plus provide room for users to make or include their own very special outlines.

It is indeed rewarding to have a student arrive early for class breathless to pass on the information that she has researched and come up with an ironclad, unique way to right a particular, troublesome word or phrase. Since I would always let it become a topic of discussion at the beginning of a class, I felt confident that students were working even harder outside of class, as well as, responding to the learning environment in class. They became active participants in the outcome of their education.

I also would like to thank the Court Reporting program directors who responded to the EMSDQ and the practicing reporters who contributed, and the NSRA staff for their help and encouragement, and lastly, all the professionals and soon-to-be professionals in this exciting field.

## FOREWORD

**BASIC CONCEPTS:** Educationally, the basic concept that pervades this EMSD is one of *problem solving*. I believe that students, once they have advanced to speed development, should have the capability to decide how and what they write. However, deciding how and what students write should never preclude the guidance and advice of professional instruction.

It has been my observation that students who survive the rigors of the basic classes in court reporting are different than most students. They are usually aggressive, astute learners who willingly accept the mountains of material given to them in their commitment in becoming professional court reporters. Too often, these characteristics are overlooked in deference to *rote* learning.

In most systems, students are asked to differentiate between the word "a" in a phrase and the word "a" on a line by itself. It follows that this reasoning can be expanded upon to include those concepts that are ordinarily reserved for *advanced* theory classes. In fact, many students have confided to me that they felt that they learned theory, only to relearn it later.

Finally, without problem-solving skills, students expect to be *told* specifically how to write ad infinitum. Non-thinking activities inhibit their learning discoveries: They cannot *think on their fingers*. Additionally, once out of the academic environment, new reporters must shift gears and acquire much needed problem solving skills. Are they really prepared? To change this traditional mold, the natural sequence or, at least a new approach would be to integrate advance concepts in beginning theory.

**CONFLICTS:** The history of *conflict-free writing* is a rocky one. Moreover, the very nature of the complexities of English and its dynamics hinder a finite conflict-free writing. My belief is that total conflict-free writing is virtually impossible, and even if it were possible, the writer would no longer be writing shorthand. For example, the word "triple" should be written, according to most theories, as "TRIP/-L" so not to conflict with "trim"; however, the outline "TRIP/-L" could translate as "trip will". This example is only one of many.

Instead of total conflict-free writing, concentration on the improvement of the programs used on computers would be better time spent. The programs are already remarkable in that they are able to decipher syntax of a phrase or sentence. Progress is on our side.

Those writers who do not use a computer are not so concerned with conflict-free writing, because they have relied on context to translate conflicts.

If the problem solving is taken out of machine shorthand writing, so will go the excitement. Converting machine shorthand writing into an automatic skill, such as typing, would be sad indeed. The better way would have writers resolving conflicts as they occur.

Another consideration is the time saved. In all fairness, conflict-free writing can produce a quick, sometimes immediate, transcription. But how often is that necessary? It goes without saying that eliminating as many conflicts as possible saves valuable production time. Nevertheless, writers attempting to write totally conflict free for the computer pound away at their machines creating twice the

exercise and twice the note output. It follows that stress and longevity would suffer. These writers are working for the computer--the computer is not working for them. The computer should be a labor-saving tool--conserving precious time and money--and not creating physical and psychological handicaps. Unfortunately, the eventual exit from the profession might be tied to this issue of conflict-free writing.

I prefer that writers approach conflicts with the intelligence and the ability to reason out the need, speed, and readability of a conflict solution. The golden rule is "Don't create any more work than necessary." Ironically, many shorthand writers come up with the same or similar outline that many other writers use. It is not just coincidence. The EMSD was planned to help and speed the process along.

Diane G., one of my advanced (200 w.p.m.) student's who learned a different theory, refused to budge from what she had learned. Diane had a self-righteous smugness about her purity of writing. "I write everything out," she would protest if anyone asked her how she wrote a particular word. Unbeknownst to the rest of us, she spent a long semester break educating herself on, what she considered, the most important shortcuts. When she returned, she was writing 20 words faster and was boasting proudly that she had cut her notes in half. But better yet, Diane exhibited a new-found confidence, and she was ready to take her certification examination. Apparently, once she realized that she did not have to forget or erase anything she previously learned, absorbing new briefs and concepts was "a piece of cake."

Learning never stops: It is a life-long process. Even though bastions of conservatism are firmly entrenched, change **will** and **does** occur.

--- -- -- -- --

It is always up to you, the writer, to decide which way you intend to write a given outline. Ergo, many choices may be offered, but it is up to you to select one, or elect not to select one.

It would be impossible to provide the *raison d'etre* for all the shortcuts in this text. For example: Some outlines depend on how they are spelt (superior = SPROIR), how they are sounded (name = NAIM), and/or how they are abbreviated (government = GOVT); while others may depend on amalgamations (greater weight of the evidence = GREFD) or portmanteau combinations (bodily harm = BLARM). A last group can be classified as "loose theory" (flapper = FLAERP), "loose" because it is not always consistent, or "special" (real estate = RAE & bathroom = PRAOM, pardon the humor). Oddly, the "special" ones usually are the easiest to learn even though they appear to defy shorthand theories. However, the amount of *special* outlines should be kept to a minimum, otherwise retention suffers. You will have to employ your imagination, expertise, and common sense when *reasoning out* a shortcut.

This edition combines several of the smaller sections of the first edition into two larger sections: PREFIXES AND SUFFIXES, which now include consonants, consonant compounds, vowels, and words.

Some proper names have been included in the Main dictionary (e.g., "Harrison = HARS" & "Harris = HARZ"), because these names occurred frequently in practice dictations in my classes.

Whenever a question might arise about how an outline is written (e.g., "-NK"), I have tried to convert it to specific letters (e.g., "-PBG"). However, most of the time, outlines are written as conceptually learned, i.e., instead of writing "fame = TPAEUPL" it is represented as "fame = FAIM". This compendium also considers the fact that many reporters, because of different theories learned, may write a particular affix differently (e.g., final "x" and final "th"). In these instances, the concept is presented, not the letter-by-letter version.

-- -- -- -- --

Remember, all dictionaries are resources and should never be construed as law. A resource is meant as a help, in this case for resolving conflicts and promoting faster writing on the shorthand machine. Don't ever forget--

*WHEN IN DOUBT -- WRITE IT OUT!*

What you are, what you learn, and what you become, ultimately, depends on *you*.

Good luck and

Happy--but faster--writing...
