• John McCready, Healthy Horizons, Canada

• Tracy Schrans, Focal Research, Canada
Research Goals

• To measure the extent of gambling and gambling problems amongst older adults (aged 55 +).

• To determine if they are at risk for problem gambling.

• To determine if different risk factors are important for older adults (aged 55 +) compared to other age groups.
INTRODUCTION

• With wider accessibility of gambling, it is important to monitor levels of gambling-related problems, and potential high-risk groups

• One group that has been suggested to be at high risk is older adults (aged 55+)

• The majority of Ontario older adults, like other adults, participate in gambling
ISSUES

• Financial concerns
  – Savings for retirement may be accessible
  – Limited ability to replenish savings
• Increased free time
• Loneliness
• Dealing with loss & traumatic life events
Method

• Intercept study at electronic slot machine venues in central and southwestern Ontario
• Fieldwork conducted by Focal Research
• Data collected between July and September, 2013
• Stratified random sampling procedures
• 2103 individuals participated
• Survey /interview administered using a tablet
• Average of 20 minutes to complete
Multivariate Logistic Regression Analyses

- Demographic Factors (see also Table 1):
  - **Sex** – OR = 1.73 – Males more likely to be problem gamblers
  - **Age** - OR = .74 – Older gamblers less likely to be problem gamblers
  - **Employed** - OR = 2.78 Individuals who are employed are more likely to be problem gamblers

DISCUSSION

• Studied a representative sample of older casino patrons
• Gambling among older adults has been the subject of concern in recent years
• Several respondents reported spending more than $100,000 in the past year in casinos
